Editorial AS WE SEE IT

The leaders of the current "New Frontiers" thinking are presumably daily seeking ways and means of stimulating growth in the American economy. From time to time some strange ideas emanate from them on the subject. They seem to think chiefly if not only in terms of arbitrary stimulation of one sort or another with substantial admixtures of government control and direction of business enterprise. There must be several million — the larger part of those who are now agonizing over their income tax returns-who should be able to tell the Administration and its advisors of a far more effective way of promoting growth in American industry than any that have come to light so far. It is understood that the President and his advisers are at work upon certain suggestions for tax reform, but there is as yet no indication that any changes that they may presently suggest will really reach to the heart of the matter.

Penalties on the Successful

What is needed is not the provision of incentives through tax changes, but a removal of the dead hand of certain features of the present tax system. Not only the rates, which are high enough in all conscience, but the rate of progressiveness in the income tax schedules which tends so definitely to cripple initiative. For those who must, or who find it advisable for any reason, to file separate returns (that is not "joint" returns with a spouse) the rates run to deterrent levels at relatively low levels of income. Such a taxpayer who has managed to raise his taxable income to a thousand a month must pay Uncle Sam forty-three dollars out of every hundred that he adds to his income—that is at least forty-three dollars, for so soon as he passes fourteen thousand the penalty increases and continues to increase as the excess over a thousand a month increases. By the time \$16,000 a year is passed, the tax take is fully one-half of the increment above that figure.

And at that we are nowhere near the normal or usual income of those who have made (Continued on page 52)

Over-Counter Market—National Shopping Center for Securities

By Dr. Ira U. Cobleigh, Enterprise Economist

The breadth and diversity of the over-the-counter market and the unique investment opportunities available only in this market are discussed. Plus a completely updated tabulation of unlisted common stocks which have paid uninterrupted cash dividends for from 5 to 177 consecutive years.

With seats on the New York Stock Exchange selling at the highest prices in a quarter of a century, and with a spate of five million share days recently, our old friend, the Overthe-Counter Market seems quite neglected from the publicity standpoint. This is unfortunate and we propose to do our best to correct this situation; to play the spotlight again on what is by far the largest, the broadest, the most diverse trading arena in the world.

Breadth in Bonds

In bonds, the Over-the-Counter Market is massively dominant. From the smallest industrial debenture to the trading of large blocks of bonds of our greatest corporations the transactions are preponderantly overthe-counter. Even where corporate obligations are actively traded on some exchange, if 50 or more bonds are involved in a single transaction, the trade will usually be consummated over-the-counter. In municipal, governments, or special purpose and public authority bonds, the dominance of the Overthe-Counter Market is even more complete. There's little likelihood of any reduction in government debt. Over 90% of all United

States Government bonds, and all indirect governmental obligations such as Federal Housing issues, are traded in huge volumes, in the counter market. Almost without exception the bonds of cities, states, counties and districts are orginally offered and bought, sold and quoted over-the-counter. In other words the choicest fixed income investments in the world today, those protected by the faith and credit of regional and local governments and their myriad subdivisions—all these bulwarks of institutional investment portfolios are obtainable only in the Over-the-Counter Market. This fact alone should do much to dispel the prejudice of the untutored and uninformed who have, in their ignorance, tended to regard non-listed securities as of dubious quality.

The obligations of our neighbor, Canada, its provinces and municipalities, widely held among our most astute and discerning corporate and institutional investors, have their market in great volume in the same market.

Bonds in general are traded less frequently than stocks, so it is in stocks that the virtuosity, volatility and variety of the Over-the-Counter Market is more apparent. Here your selection can range from a promotional or risky mining or industrial issue selling at a few pennies a share to mature, long dividend paying stocks of some of our most respected corporate enterprises. There is, moreover, no price limit. You can buy a citadel of financial (Continued on page 26)

JAMES L. MORRIS

Partner, Powell, Kistler & Co., Fayetteville, North Carolina Members: New York Stock Exchange, Midwest Stock Exchange

Aerosonic Corporation

Small at present, but growing rapidly and already substantial in its field, is Aerosonic Corporation of Clearwater, Fla. The company

is one of a mere handful of firms manufacturing such mechanical aircraft instruments, as altimeters, rate-of-climb indicators, cabin pressure indicators, compasses and air speed indictors. Mechanical instruments, far

James L. Morris

from giving ground to electronics, are found in practically every airplane flying today and the United States Government actually requires that at least one set in each military aircraft regardless of how many sets of electronic instruments it carries.

tures the complete instrument parts of the instruments must be built to extremely close tolerances and the whole instrument as well as its component parts, is subjected throughout the operation to exceptionally high quality test- flick of a switch. all within the company's plant.

Aerosonics is not an old comexistence in 1953 by two young engineers who have spent all of their business lives in the aircraft instrument field. The company grown from a nominal amount in 1954 to \$882,000 for the year ended May 31, 1960. Net income has kept pace with this rise in sales from a loss in 1954 to a profit of \$54,000 in 1960. For the five months ended Oct. 31, 1960, sales amounted to \$729,000 and a net profit of \$152,000 or 27 cents per for earnings in the vicinity of 50 cents per share for the year to companies in the field. end May 31, 1961.

Up to the present time, most of with the military. In this market, consisting of only about 30,000 aircraft, the company has been able record. More emphasis is markets and the company is rapidly penetrating the commercial and private aircraft field. Some idea of the potential of this market can be gained when it is realized that there are approximately 70,000 aircraft operating in these two fields, and the number is in-

sources. The supply of these instruments has been dwindling rapidly over the years, and it is estimated that it will begin to give out within the next year or two years. When that happens, these airplanes will be dependent on new instruments for original and replacement equipment.

Normally, instruments are servic-able for from one to three years before major repairs or replacements are necessary. These instruments are not normally high cost items and it is usually more economical to replace them completely than it is to undertake major repairs. This results in a continuing market for the company's products and if repairs are deemed advisable, the company in many cases does this work also. Even though repair work might be done by some other firm, Aerosonic may still furnish necessary parts. As a matter of fact, any order for instruments also results in a substantial amount of spare parts business for the company at the time the order is

made up. Aerosonic has recently developed an integral lighting system which is adaptable to every inof such mechanical instruments be strument in its line, and this development will doubtless be of tremendous benefit to the com- Ice was moving along slowly with pany. Heretofore, all instruments Aerosonics is almost a completely of this type have been lighted integrated operation and with the from external sources. American Ice Company

Rare indeed is the security in today's market which provides substantial income together with outstanding growth potential. Yielding 5% and selling at under ten times estimated 1961 earnings, American Ice common stock possesses these qualities in precisely the required rare combina-

The Background

Until three years ago, American

its basic product lines and with no dy-namic plans for future expansion. In early 1958, a group headed by Joseph S. Robinson, now Chairman of the Board. took control of the company. The operational changes since

Edward L. Brennan

instituted have dramatically altered American Ice's profit curve and future

For example, U.S. Cold Storage Corporation (70% owned) saw its to \$25 million in 1958. However, its share earnings actually fell U. S. Cold Storage in early 1959, the new management group moved profits up 21% to \$1.35even though total sales actually dropped several million dollars! This earnings improvement came through extensive reorganization and effective cost-cutting programs. Similar developments have improved the operating efficiency of the entire American Ice corporate structure.

A National Network

This structure comprises a network of separate companies operating in the Western, Central and Eastern States. Products include ice, coal, coke, fuel oil, frozen foods, poultry and egg products; services range from refrigerated and general merchandise warehousing to food freezing and the dehydration of food prod-

From its headquarters in New York City, American Ice directs its two wholly-owned subsidiaries: Knickerbocker Ice and Boston Ice. These companies own and operate 30 ice-making plants with a daily capacity of 6,500 tons. In recognition of the shrinking market for ice, these companies have moved strongly into other lines. They now distribute coal, coke and fuel oil in a zone extending from Boston to Washington, D. C.

Predicting the Predictor —A Stock Market Appraisal

By Harry D. Comer,* Partner, Paine, Webber, Jackson & Curtis, New York City

Investors' attention is directed to some blunt facts about the general market which may have escaped them. Mr. Comer depicts the market as probably over-valued, vulnerable to disappointing news, and he stresses the need for an "unusual amount of caution" in selecting commitments. For those who see inflation ahead, the Wall Street partner notes: the market has already discounted it far into the future; stocks in greatest demand are not the hedge type of stocks; industrial stock prices have risen 13 times as much as earnings and stocks are up 333%, whereas cost of living is up 66%; and a substantial increase in corporate profits would be needed to prop current prices. Before describing favorable stock groups, Mr. Comer notes grounds for a possible sizable reaction.

banker. The banker passed it on about 5%

to a client, who then bought the stock. The tip failed, the stock dropped, and the client complained to the banker and asked him to "bawl out" Mr. Livermore. The banker refused, saying he couldn't possibly do that. "Why

0.

won't ever give me another tip." unlimited demand for market advice, especially if it comes from what is regarded as a "good

said the banker, "if I do that, he

Somewhat similarly, there is a big demand for forecasts of economic conditions and of the stock market. The public appetite for predictions has not been lessened one whit by the fact that nearly all publicly announced forecasts for 1960 at the beginning of that year turned out to be wrong. Almost without exception these forecasts were extremely opti-

Yet, a year later, President Kennedy was telling Congress that "we take office in the wake to say that a loss of 11/2% or 2% and one-half years of slack, seven years of diminished economic 1961 and 1962.

Here we are well into 1961, years, corporate earnings lower on our heads. than a year ago, steel operations running about half of capacity, loadings off 13% from a year ago.

> Much of the steam back of this rise in the stock market is attributed to the inflationary aspects of the Kennedy spending program.

Inflation—Deflation?

Inflation is indeed the 64 billion dollar question. It has to do with the future value of money, the common denominator of all property. Will the cost of living, now about the highest on record, continue to rise? Will the Kennedy spending programs force the cost-of-living higher? It remains to be seen what Congress will do.

Congress controls the purse strings and there is still a lot of conservatism there. For example, the recent vote on enlarging the rules committee was very close-There is, apparently, an almost 217 in favor to 212 against-hence a majority of only five for Kennedy. (The 217 "for" included 195 Northern and Western Dems and 22 liberal Reps; the 212 "against" included 148 opposing Reps and 64 Southern Dems.) Obviously, Congress must still be reckoned with and will probably block any wild spending proposals.

Nevertheless, it is true that one of the President's top economic advisers, Prof. Samuelson, thinks a \$5 billion Federal deficit this year would be all right, provided the Administration channeled the red-ink money into devices for stopping the recession. In a recent TV broadcast Samuelson went on of seven months of recession, three per year in the dollar's buying power is much to be preferred to occasional economic slowdowns. growth" and "with forecasts of I think there is dynamite in such continued slack and only slightly a policy. Even if the Washington reduced unemployment through planners are aiming at any such a goal, the public should not know about it. The Administration with the business cycle, measured should always pursue a program by industrial production, trend- of fighting inflation as well as ing downward since its peak in deflation. Otherwise, speculation January of last year, unemploy- might catch fire and our whole ment currently the highest in 20 house will come tumbling down

On the other hand Secretary of the Treasury Dillon recognizes the auto plants recently closing down necessity for American industry on account of the huge inventory to compete with foreign producers of unsold cars, and railroad car- and hold prices down. In Mr. Dillon's words, management and In the stock market, however, labor must realize "that profits we have had soaring prices and and wages need not always be inbooming activity. OBSERVATIONS...

BY A. WILFRED MAY

BELL RINGING

"History, which has a painful way of repeating itself, has taught mankind that a speculative overexpansion invariably ends in over-contraction and distress. If a Stock Exchange debauch is quickly arrested by prompt and determined action, it is not too much to hope that a shrinkage of inflated stock prices may be brought about without seriously affecting the wider circle of general business. If orgies of unrestrained speculation are permitted to spread too far, however, cal. (Typically, one of the experts, the ultimate collapse is certain not only to affect the speculators themselves, but also to bring about a general depression involving the entire country

"The public mind does not appear to realize that the creation a "replica of 1929's New Era raof an inflated purchasing power is not a monopoly enjoyed by governments. When we consider that the market value of the 50 industrial stocks, the 20 public utility stocks, and the 20 railroad shares, which are used in computing the Standard Statistics Company's index of the prices of stocks, has grown within two years from approximately \$17,-500,000,000 to \$33,000,000,000, we find an accretion of approximately \$15,500,000,000, an accretion in the majority of cases. quite unrelated to respective increases in plant, property, or earning power. Yet this stupen-dous bulge in 'value' covers only a limited number of corporations, and it does not include bank stocks, or some of the subtlest elements of inflation - incorporated stock pools, called 'investment trusts.' Nor does it comprise the gigantic enhancement of real estate values. One can only leave it to the imagination to guess the amount by which the inflation of values such as these exceeds the entire war debt of the United States.

This unequivocal warning concerning the saturnalia of stock market speculation of the time, was issued in the first week of March, 1929 by Paul M. Warburg, Chairman of the Federal Reserve

These unexceptionable words of wisdom were followed marketwise by a further rise-on-rise of a full 29% (300-386 by the Dow Jones Industrial Average); with

*In 1928 annual report of the International Acceptance Bank; cf. the Commercial & Financial Chronicle, March 9, 1929, pp. 1443-4.

UNDERWRITERS

Natural Resources

Industrial Securities

the decisive peak not reached until six months later.

The Funstons of the Fifties

Twenty-six years later, in March 1955, the United States Senate provided a world wide platform for the airing of stock market reflections and predictions, in its glamorous "Fulbright Committee" hearings. Coming after six years of a bull market registering a net rise of 160% (160-413 in the DJIA), the testifying witnesses' preponderant flow of cautionary observations were altogether logiin pointing to the course of events as leading "from boom to doom," cited the craze for penny stocks, "blue chips" and growth issues; the entry into the market of "irrational" buyers; and foresaw tionalism which led to the poor house.")

Again demonstrating the puzzlement of the "Just how high is too high?" question, that "road to the poorhouse" has surely been circuitous. For, following the guessing-at-the-'Fulbrighters'" turn, the DJI Average has since tacked on an additional rise of 65% to 694, the new high at which it stands at this week's

The Constructive Implications

The purpose of our recital is not, of course, to remove today's speculators' qualms over "our" Keith Funston's warning (diplomatically diluted), any more than to spoof the past Cassandras. Rather it is our constructive purpose to show:

(1) The impossibility of timing terms of market action. High is high, but discovery of the point of too high is an entirely different matter.

(2) The market never sounds a gong to signal a turn. Nor does even ring a preliminary bell. If it did, and it was widely enough recognizable, the market crowd would increase sufficiently to start "the end" at 10 a.m. tomor-

The Crucial Danger

Perhaps the post-warning market rises are harmful in addition to their inflationary effects, in being empirically interpreted as 'realistically" proving as academic, egg-heady, and old-fashioned buncombe, anyone's doubting of a "New Era." (The same tenor as scoffing at those concerned over the mad rush into

DISTRIBUTORS

Unlisted Securities

Secondary Distribution

triple, aon't they"?)

"Don't Fight the Tape" (?)

Remember, the window jumpers midst the Crash in 1929 were et al!) mostly those who had been bearish in 1928, correctly on logic but "proved wrong" by the market's subsequent strength through September of 1929 (followers of that marvelous Wall Street "don't fight the tape" concept).

NAILING THE HUCKSTERS

In its attack on the disgraceful market luring and raw tipping that has been going on under cover of "free speech" in advertising the SEC now cuts a number

of Gordian knots. Obstacles troubling those concerned over the need for reform, including the difficulty of controlling the press because of intrastate exemption and other policing difficulties, and frustration of expectations from the Federal Trade Commission, are now on the way to becoming resolved by the contemplated whole-hearted application of the Investment Advisers statute via administration by the SEC.

This gets under the text regulatory tent all promoters of security "advice" with the unimportant exception of those who deal in only one state, do not use the mails, and treat of no issues that are exchange-listed. This coverage results from amendment of the original Advisers Act, including some forced through by the late Senator Robert A. Wagner and some provisions adroitly now joined in the Commission's pending proposals.

As the proposals now appear to imply (subject to more considered later analysis), they go as far as could be desired, both in their statement of specific rules and in the blanket administrative powthe impact of value factors in ers given to the administrative agency, the SEC.

New Frontier

In the category of specific rules, they go far beyond the Statement of Policy which has been controlling mutual funds advertising. The latter has merely prescribed that past performance demonstrations, as with charts, must be accompanied with offsetting disclaimers which (as we have previously demonstrated) have in fact been quite ineffective. The new proposal would, in effect, bar the use of any performance chart, along with other self-glorifying record.

The new proposals accompany their strictures on the past with control over the abusive claims over the future (the "50 stocks to double your money in 6-months" kind of blurb). This would be Trade Commission and the Biaccomplished through the pro- State Blue Sky Laws. posed section (5), which is to serve as a discretionary catch-all, barring anything: "which contains any untrue statement of a ma- of hucksters promoting the terial fact, or [sic] which is other- How-To (i.e., how to beat-the- LOS ANGELES, Calif. — Warren wise false or misleading." (Too bad the industry or the publishers could not have cooperatively adopted preventive self-regula-

The "Systems" to the Dog-House

Furthermore, the new rules would, constructively we believe, bar the claim that any graph, chart, formula, method, system or device can in and of itself be used to determine the choice of securities, or the timing of their purchase or sale — without "fully disclosing, in close juxtaposition and with equal prominence, the limitations and difficulties with respect to its use." The practical effect of the last quoted clause will be to bar entirely these "sys-

*In his recent report to the President, Adviser J. M. Landis pictured the "adviser" situation thus: "Controls should be extended more widely against so-called investment advisers many of whom have morals not exceeding those of tipsters at the race track."

new issues. "They double and tems"; because of the impractication triple, gon't they"?) double and tems"; because of the impractication triple, gon't they"?) setting forth its deficiencies. Tom Deegan Co. Theorists, Point-and-Figure-ists,

> The Commission points out that it has power "not only to define such acts and practices, but also to adopt rules designed to prevent them.'

> Further implementing its enforcement powers, both specific and catch-all, the Commission has the power not only to require investment advisers to maintain books and records for inspection, but also to prescribe the books and records to be maintained.

"Conscientious Objections"

Of course there is bound to be objection to the government's new step in control-on grounds of bureaucracy, freedom of speech and press, etc. But it seems wholly invalid to us to offer the analogy between huckstering toothpaste and suckering the uninformed into stock speculation. The former is quite harmless at worst. In the latter process, the customer's bankroll (savings) is endangered; and of great importance to the community, the inflation fire is being fueled.

The Stirring Stock Exchange

In filling voids in this control front, the Stock Exchange member firms have also been getting a "wiggle on." For a long time back, all advertising by members has been monitored and otherwise controlled by the Exchange authorities (Rule 47 states: "member organizations shall submit to the Exchange — before publication all advertisements for approval of manner and form of presentation, unless the copy is in a general form previously approved").

The avalanche of market letters. of course, does not permit them advance monitoring; but they are subject to ex post facto checking and thus elimination of repeated

Recently in striving for further improvement, the objectives received further clarification and redefinition in a meeting of member firms with the Exchange officials who are administering the long-term rules. Although the Exchange spokesmen deny any call for drastic action (presumably as not being needed), the trend, "in line with the times," would certainly seem to be in that direction.

Top changes in the management and directorate of the Thomas J. Deegan Company, Inc., have been announced. The company is public relations adviser to a dozen of the country's leading corporations.

L. Richard Guylay was elected president and a director to succeed Thomas J. Deegan, Jr., who becomes chairman and chief executive officer. At the same time Morton Downey was elected to the board of directors. Mr. Guylay will assume office in the firm's New York headquarters in the new Time and Life Building on

Mr. Guylay started his career in communications as a reporter for the New York Herald Tribune. He then served as director of public relations for the Tax Foundation and for the Gannett Newspaper Subsequently he established his present firm in 1945 in New York and Washington. He will dissolve this company on joining the Deegan firm.

He was asked to take a leave of absence from his business in 1956 to head the public relations for the second Eisenhower presidential campaign.

While he has served many clients in the political field, the major portion of Mr. Guylay's experience has been gained in public relations service to business organizations and industrial firms.

Mr. Downey is president of The Coca-Cola Bottling Company of New Haven. Connecticut and a director of the Federation Bank and Trust Company of New York and other corporations. Mr. Deegan is chairman of the executive committee of the New York World's Fair, past president of the Marketing Executives Society and a director of Briggs Manufacturing Company of Detroit, The Industrial Bank of Commerce, The Fifth Avenue Association and other organizations.

Bank Term Loans and The Interest Rate Outlook

By Dale E. Sharp,* President, Morgan Guaranty Trust Company of New York, New York City.

New York banker questions the effectiveness of the Federal Reserve's policy of interest rate "nudging," and calls for lifting or revising Regulation Q's ceiling on certificates of deposits for both domestic and foreign accounts. Mr. Sharp strongly defends commercial banking term loans but adds that additional loans in this area should be accompanied by more time deposits. This necessitates, he adds, interest rate flexibility in order to compete against our developing "second banking system" for short term funds. Mr. Sharp sees the interest rate level firming up in discerning we are near bottom on both long and short term rates and that the year's end will find them higher.

even to appear on a platform in these days. The air is charged with change and for none, I think,

more than for the bankers. In less than five months we have seen a near - crisis in gold, a revaluation of the German mark, the abandonment of our own Federal Reserve System of the "bills preferably" policy, and a

decision the New York City banks, after nearly 30 years, to pay interest on the time deposits of domestic cor- national exchange value of the porations. But we have accommodated ourselves to change, I think, as well as any other branch of enterprise, contrary to what many outsiders seem to believe about

During the 30's, our lending rates seemed "starvation wages," but at the end of that period we were still able to assist powerfully in financing the war. The ing short-term rates here to de-immediate postwar period was cline too much below those not much different rate-wise from abroad. However, I am not sure the depression and war periods, although we had more resources and, therefore, somewhat higher earnings. Our lending rates still time, the Administration has inreflected artificial control of the money market and, as has been term rates down in the hope of wisely said, "Monetary policy is made without regard to the earnings of the banks." Not until just 10 years ago, then, did we begin to have free markets and an interest rate structure that reflected the supply of and the demand for money. This was the so-called 'accord of 1951," shortly after which the Fed began operating exclusively in the short end of the list-a policy of "bills prefer-This policy has now been abandoned, with what effect only time will tell. But will be different—there has been a change.

can abide change, but we can still our cause in the free world. insist that it stay within certain We doubtless could make our basic principles. One of these is balance of payments look much

One needs a good deal of temerity that it is wrong to monetize the government debt, at least in peacetime. Another is that chronic budgetary deficits are wrong. Happily, the Federal Reserve has eschewed the first and the President the second, although his suggested sources of revenue for accomplishing even a cyclical budgetary balance are open to some question. Another is that we cannot indefinitely continue to incur net short-term foreign claims against us the while our gold reserve declines. Our international receipts and payments must be brought into approximate balance, else the drain on our gold reserve will accelerate—with ultimately disastrous consequences.

Happily here, too, the President recognizes the problem and has stated in unequivocal terms that we will protect the present interdollar and has pledged our entire gold reserve to that end. In doing so he helped to stop the wild speculation in the dollar and to reduce the gold outflow. He and the Federal Reserve Board both also have indicated a desire to discourage American short - term funds from going abroad for a higher interest rate by not allowcline too much below that this feature isn't overemphasized and I shall have something to say about it later. At the same dicated a desire to bring longencouraging domestic investment in housing and producers' capital

With respect to our adverse balance of payments, which I am sure has been discussed endlessly nearly every solution proposed appears to have at least one disqualifying flaw. For example, it would seem that we could greatly reduce the payments deficit by cutting back sharply on foreign loans and grants. But not all of the gain would be net gain as some part of it would go to reduce we have demonstrated that we the damage that might be done to

driving interest rates here above rates, are favorable to investment maintain our competitive status tnose abroad. This would encour- here. In other words, a loss of abroad. . . . The public interest age repatriation of short-term investment funds and attract additional foreign funds, but it would this factor alone, is offset by must be found to bring that pubrun counter to the desire to keep American - owned short - term lic interest before the parties conmoney easy in order to encourage the economy. It is partly in response to this dilemma that the Federal Reserve Board has altered its open market policy of dealing chological only, although I do not play a major role in helping proonly in nearest-to-money instruments and now operates as well effects of psychology in this whole cies, productivity increases and a in the longer maturities.

Questions Federal Reserve Policy

The Federal Reserve Board has firmly denied any intent to peg markets and insists it wishes only to give a "nudge" to what are alleged to be sticky rate patterns. I am sure, however, that it would not guarantee that even this can be done successfully. It may appear to be successful when the operation is in the same direction as the general trend of the market. If the Fed should ever feel impelled to go beyond this, when there is pressure on the long end of the market, it will immediately face the dilemma of deciding what level of long-term rates is desirable at the moment and what sort of support is necessary to achieve it. Even now, the market has no way of knowing what criteria the Fed is using to govern its actions; it can only observe the magnitude of the open market operations and measure them against the result in terms of market prices. By this measurement, the operations to date have not been conspicuously successfull. Some \$600 million worth of government issues with a maturity beyond one year have been purchased; despite this support, prices in this sector of the market have drifted back to about their tion: level at the time the new policy was announced. Bill rates also are about where they were at that time.

There is one body of opinion to the effect that, even at this level of bond prices, the Fed is trying to row upstream and that, in fact, long-term Treasury issues are already selling too high when related to the gross national product and the money supply. The money supply in the last two months has been allowed to increase at an annual rate of about 4% and, without any ability to read its thoughts, it seems probable that the Fed will allow it to increase in the future at a rate higher than in the last two years. Nevertheless, if the gross national product resumes its growth, the demand for money will rise and will continue to press upon the supply. In that event, interest rates will rise notwithstanding any concurrent or intervening purchases by the Federal Reserve System. In other words, the Fed simply cannot align itself in opposition to the composite decisions other without running the risk of unfunding (and, to some extent at least, monetizing) a large part of the government debt. As I have said earlier, I think, the Fed sees as plainly as we the ultimate consequences of such action and has vehemently disclaimed it as a policy. Nevertheless, the new approach does represent a change and we shall have to remain alert to it as it unfolds.

I discussed earlier the official concern about keeping short-term rates high enough to discourage a movement of funds abroad and suggested that this might be overemphasized. This movement was a factor, and a large factor, in increasing our adverse balance of payments in the last half of last year; but, except to the extent that the outflow was a real flight from the dollar or was advance provision for permanent investment to be made later -and there was some of bothit was a temporary influence which will reverse itself when comparative interest rates, ad-

Ways claims abroad which can and will cerned in a fair and orderly manbe repatriated when it is advan- ner. therefore, if there is any, is psywish to minimize the potential mote sound wage and price poli-

Crux of Our Problem

However, even if these shortterm movements of money could be ignored, we still have what is called the hard-core of our adverse balance to contend with. The only adequate and constructive solution to the balance-ofpayments problem lies in an increase of exports, and this in turn demands wage and price policies that will keep American goods competitive in international markets. But this cannot be done if costs continue to rise, if labor is to demand and obtain, year after year, wage increases, fringe benefits, escalator clauses and socalled productivity increments that add up to more than the actual rise in output per man-hour. Such a process means increased labor cost, and hence total cost, per unit of output. Higher costs inevitably mean higher prices, and higher prices discourage exports Would Lift Time Deposits, Ceiling and encourage imports, thereby contributing to our adverse balance of payments.

force" on the "Domestic Economy investment in what has come to and the Balance of Payments. consisting of Mr. Allan Sproul, Dr. system, have wondered how we Roy Blough and Dr. Paul W. could acquire the increased re-McCracken, made this observa-

'We must strengthen the conditions essential for vigorous price and product competition. . believe that a part of our difficulty in maintaining a stable price level has arisen because our wagemaking arrangements have tended to produce wage settlements averaging, for the whole economy, more than the general increase in productivity, even in the absence of an inflationary volume of demand. There are now some hopeful signs. A wider undertsanding exists of the simple fact that persistent increases in unit production costs mean a rising price level, or enlarged unemployment, or some combination of the two.

The President himself said in his address to the National Indus- can attract while we can be comtrial Conference Board on Feb, petitive with other short-term

turn their attention to the problem of price stability. Concern ary pressures hangs over all our fully aware of the huge amount efforts to restore the economy,

. I want this Committee tageous to do so. The damage, [Presidential Advisory Committee on Labor-Management Policy | to betterment of America's competitive position in world markets. I will look to this Committee to make an important contribution to labor - management relations and to a wider undertsanding of their impact on price stability and our economic health. . . . Economic growth, plant modernization, price stability—these are all intangible and elusive goals. But they are all essential to your success and to the success of our country. Initiative, innovation, hard work and cooperation will be required, on your part, and on

These views constitute a clear appeal to economic statemanship on both sides of the bargaining table. While in the past similar appeals have not been very successful, perhaps the seriousness of our balance-of-payments problem will generate a sense of urgency sufficient to bring a change.

And now I should like to refer briefly to time deposits. Those of us who have watched our demand The President's special "task deposits steadily draining way, for be known as the second banking sources that we should most certainly need to meet the increased loan demands of the future. And the only ready answer was, "We shall have to buy them." And we shall have to be able to pay enough for them to attract what we need in competition with other short-term investments, principally, of course, Treasury bills. In consequence, in order for this to be a reliable source of funds, there will have to be a lifting or a revision of the ceiling now provided under Regulation Q as it relates to certificates of deposit, both domestic and foreign. I shall not venture a suggestion as to whether savings deposits should be included.

For certificates of deposit, however, the need for rate flexibility is clear. The deposits that we rates, as we now can, must stay "Government and business must with us when rates rise or the whole effort will fail. All of us who were affected are still pain-

Corporate Market No Help

This situation was partly induced by an upset corporate bond market. Confronted with an unheavy volume ahead, and with the usually heavy schedule, corporate longer government issues acting dealers have been backing away from the market but apparently with less alacrity than the institutional investors. The \$45,000,000 New England Telephone and Telegraph issue, presumably priced for quick disposal, failed to attract investor interest on initial siderable difference of opinion offering Tuesday. Naturally, the entire bond market was adversely affected; long governments were also easy. It would seem that municipal bond dealers have recently been more realistic in pricing their king size issues than have their corporate counterparts.

Recent Awards

Although the new issue calendar was not particularly heavy this week, there were a number of issues of general market interest which came up for sale. This was in contrast to the past three weeks when interest each week was principally centered in one very large issue.

On Tuesday, Los Angeles County Flood Control District, California, awarded \$15,000,000 serial bonds, due 1962-1989 to the account headed by the Bank of America, N. T. & S. A. and including The First National City Bank of New York, Bankers Trust Co., Blyth & Co., Inc., The First Boston Corp., The First National Bank of Chicago, Smith, Barney & Co. and 3.85% for 33/4s. Initial reception was exceptionally good. A sell-out is indicated.

Also on Tuesday, \$14,520,000 Cleveland, Ohio various purpose Limited (1962-1966) and Unlimited Tax (1962-1981) bonds were awarded to the syndicate managed jointly by The First National Bank of Chicago and the Bankers Trust Co. which included among the majors The First National City Bank of New York, Smith, Barney & Co., Chemical Bank New York Trust Co. and Harriman Ripley & Co. The \$14,300,000 unlimited tax portion of the issue upon reoffering was scaled to yield from 1.60% to 3.40% for 31/4s. At present writing \$5,768,000 of the bonds remain in account.

Well Received

The University System Building Authority of Georgia also sought bids on April 11 for \$13,000,000 (1962-1986) revenue bonds. The syndicate managed jointly by Blyth & Co., Inc. and Robinson-Humphrey Co., Inc. and including Equitable Securities Corp., Smith, Barney & Co., Goldman; Sachs & Co. and many others was the high bidder for this issue. The reoffering scaled was priced to yield from 2% to 3.80%

Despite some disparity in the net interest cost of the high bid and the other two bids which were submitted, more than half the issue was sold upon initial reoffering. At present a balance of \$5,734,000 remains in account.

The California Toll Bridge Authority, also on Tuesday, awarded \$5,000,000 San Pedro - Terminal Island Bridge revenue bonds due July 1, 2000 to the syndicate composed of Allen & Co., B. J. Van Ingen & Co., Goodbody & Co. and Leo Oppenheim & Co. The Authority had previously rejected a bid on March 28 which was submitted by another group on legal grounds. This long-term issue was reoffered at a price of 102.20 for 47/8s, to yield 4.75% approximately to maturity. Excellent investor reception was accorded the issue and, as we go to press, it is reported as a sell-out.

Tuesday also marked the sale by Shreveport, La. of two issues of bond totaling \$5,400,000. Eoth issues were awarded to the syndicate headed by Johnston, Lemon & Co. and almost an ident'cal list of associates. The \$3,900,-000 various purpose general obligation issue (1963-1981) were priced to yield from 1.60% to 3.50%. Realistic Pricing Essential

The street float as indicated by the Blue List on April 13 continues to be relatively heavy. Since early March the state and municipal bond total has been over \$400,000,000. As of April 12, it was \$440,904,900. Realistic pricing for most of the recent large issues has kept the total from reaching the half-billion mark.

In view of the general bond market's unsettlement, dealers must continue to fashion their price scaling to the institutional deof Chicago, Harris Trust and Sav- mands. The Federal Reserve may ings Bank, The Chase Manhattan help by gesture and by token, but Bank and Halsey, Stuart & Co., the volume must be carried by broader interests. The state and The bonds were priced to yield municipal bond calendar continues many others. The bonds were from 2% to 3.50% upon initial in the \$500,000,000 area, with a priced to yield from 1.60% to reoffering. Before the termination plentiful additional potential

> This announcement is neither an offer to sell nor a solicitation of an offer to buy any of these Units. The offer is made only by the Prospectus.

MUNICIPAL INVESTMENT TRUST FUND SERIES A

10,000 UNITS

Interest income to the Fund and to the holders of the Units will be exempt from all Federal Income Tax under existing law pursuant to a ruling of the Commissioner of Internal Revenue dated March 9, 1961.

DESCRIPTION OF FUND

The purpose of the Fund is to make available investment in the diversified portfolio of Municipal, Revenue and other tax exempt bonds set forth in the Prospectus. The portfolio is fixed and may not be varied, and proceeds from the disposition of tax exempt bonds held in the Fund will be distributed to holders of Units, as described in the Prospectus. The Fund is a unit investment trust under the Investment Company Act of 1940.

DESCRIPTION OF UNITS

Each Unit represents a 1/10,000th interest in the \$10,000,000 principal amount of tax exempt bonds held in the Fund.

OFFERING PRICE

Determined daily on basis of current offering prices of tax exempt bonds held in the Fund (less certain discounts allowed on acquisition) plus a commission equal to 4% of the offering price of the Units, plus interest income to date of delivery.

Copies of the Prospectus may be obtained in any State from only such of the undersigned as may legally offer these Units in compliance with the securities laws of such State.

Old

the past two months, and there have been some further indications that the recession may be bottoming out. Declines in the more important indicators have become fewer in number and smaller in size, and some key series have either leveled out or turned upward. While these developments have led to a widespread expectation that the turnaround may some some time within the current quarter, few business analysts have forecast a strong upturn, and businessmen themselves apparently anticipate only a mild increase in sales during the year. Thus, even if an upturn is soon to begin, a serious question remains as to whether the ensuing expansion will be vigorous enough to bring a substantial reduction in unemployment from the current high level.

"In some lines, orders and sales provement, to some extent reflecting a step-up in government spending as well as expanded private demand which was bolstered, in part, by rebounds following unusually bad weather and pre-Easter buying. Even these latter factors may provide a timely stimulant to economic activity if they cause an expansion in output rather than simply a further liquidation of inven-

"In many industries, however, large stocks of finished goods have continued to act as a buffer, tending to moderate, or even to preclude, the gains in output and employment which might be expected from upturns in sales. This has been the case, for instance, with automobiles, even though the inventory picture there was improving late last month. Steel, on the other hand, is one industry where expectations of a seasonal upturn in demand of final usersnotably the construction industry - appears to have triggered a more general improvement in orders and production. Thus, steel output has moved up moderately from the January low point, even after allowing for normal seasonal

Fixed Investment During the Recession

"There are some tentative indications that residential construction activity may be on the verge of a revival. Housing starts (seasonally adjusted) rose in both January and February despite the severe weather, leading to a modest increase in residential construction spending in March. Until recently, the performance of this sector has been weak relative to that of earlier recessions. Private residential construction outlays moved erratically downward from July 1959 through the early part of this year, whereas during the 1957-58 recession construction expenditures were roughly level, and in 1953-54 there was a relatively early

"It has been suggested that, because the backlog of postwar housing demand has been satisfied, home building may have become significantly less responsive to credit inducements. In support of this argument, it is pointed out that in 1960 some slight easing of credit availability to the housing sector occurred even prior to the general business peak during the second quarter, whereas in earlier

The April Monthly Review of the recessions an easing of mortgage

"On the other hand, mortgage "The over-all pace of economic interest rates in early 1960 had activity has changed little within reached a much higher level than they had prior to the previous business downturns, while the easing in such rates, though starting sooner, progressed more slow-ly during the current recession. Now there are indications that a more substantial shift in the tone of the mortgage market may finally have occurred—a result of the cumulative impact of the general easing in credit conditions since early last year, along with the recent counter-recession actions of the Federal Government -so that a more decisive test of the strength of the underlying demand for housing may be close at hand. The next several months probably will show whether the recent rise in housing starts points toward a revival in residential construction, or whether it is just volatile series.

public construction by accelerat- a 17% actual drop (from \$37 bil- could improve more than 10%.

ing the supply of funds available lion to \$30.5 billion) between 1957 during the current half year for and 1958." highways and post office buildings. Total public construction outlays had already moved markedly upward during 1960, but declined somewhat during the first quarter of 1961 as a result of reductions in spending for highways and nonresidential buildings.

"In contrast to indications that both private residential and public construction may show growing strength in coming months, businessmen's plans for plant and equipment spending suggest a continuing decline through the first half of the current year. The total contraction in such outlays during this recession remains, however, quite mild in comparison with the previous recession. According to the latest survey of business plans for fixed investment, taken by the United States Commerce Department and the Securities and Exchange Commission in February, spending was expected to slip by 3% in the first quarter of this year and by another 2% in the quarter just begun. Planned outlays for the whole of 1961, however, are only 3% below the actual 1960 level (although 7% below the level anticipated early in 1960), which implies an upturn some time duranother erratic swing in this ing the second half of this year. Bank Clearings for Week Ended April 8, 1.7 % Above the 1960 Week

Bank clearings last week showed an increase compared with a year ago. Preliminary figures compiled by the Chronicle based upon telegraphic advices from the chief cities of the country, indicate that for the week ended Saturday, April 8, clearings from all cities of the United States from which it is possible to obtain weekly clearings was 1.7% above those of the corresponding week last year. Our preliminary totals stand at \$26,043,723,813 against \$25,598,-490,428 for the same week in 1960. Our comparative summary for the leading money centers follows:

Week Ending (000s omitted) April 8— 1961 1960 %
New York \$13,319,907 \$13,789,213 — 3.4
Chicago 1,476,504 1,220,378 +21.0
Philadelphia 1,243,000 1,031,000 +20.6
Boston 793,185 776,326 + 2.2

"Iron Age" Believes April Steel Orders Will Show a 10% Increase Over March

Orders for steel on the books now indicate April will show a 10% improvement over March, The Iron Age reports.

Orders on the books of major mills are from 5% to 10% ahead of the same period in March. Based on recent experience that late orders are now a big part of each month's tonnage, the magahave already shown signs of im- ment has also acted to stimulate \$34.6 billion in 1961 contrasts with zine observes that April business

On the basis of unofficial percent of capacity, April production could hit 60%. With the upturn continuing, although slowly and in starts and stops, the second quarter should average about 63% of capacity.

This means the recovery is proceeding at a slower rate than anticipated. A rate of 65 for the quarter was widely predicted earlier.

However, the reason for the slow rate is not hard to find, the national metalworking weekly points out, in spite of some improvements in auto sales, the automakers are not aggressive in the steel market, and are not likely to be through the second quarter.

It is possible that if there is a sudden spurt in auto sales, the automakers could come into the market for heavy tonnages in May and June. But as the spring sales upturn fails to meet automakers' hopes, this grows more unlikely. The next full steel buy by a typical auto plant will reflect production plans for July. In the mean-time, only "fill-in" tonnages can be expected.

The improvement in the market still reflects more small orders from a wide range of customers. Tinplate and galvanized continue to lead the way in recovery of specific products.

For this reason, many in the steel industry believe the current pickup is more seasonal than reflecting a sustained upturn in Continued on page 54

Inflation Remains Our Most Important Economic Problem

By James C. Dolley,* Vice-Chancellor, The University of Texas, Austin, Texas

Clear warning signals about inflation's resumption are said to be up and flying by Texan economist who is not unaware of present excess capacity, growing price competition, rising labor costs and impact of all this upon per-share earnings. Nevertheless, the stock market's price rise is not attributed to these economic factors but to future fears about the price level. Outlined are six factors apt to induce price inflation; a distinction is made between two different types of inflation and their consequences; and a plea is made to return to "fiscal sanity" no matter how unpopular.

inflation—to my thinking poses a fewer jobs, but also from the inmore serious threat to the nation creasing number of young people than the Russian military build-

up. Since 1950, the amplitude of our business cycle has been relatively short, about 31/2 ears from prosperity peak to peak. We have had minor recessions beginning in 1953. 1957, and 1960, but no one of these recessions has been

James C. Dolley

deep or long-lived. In each instance the primary factor has been readjustment of inventories, a short period of inventory overaccumulation being followed by an even shorter period of inven-

tory de-cumulation. mists, and I concur, we are now nearing the end of a period of inventory de-cumulation. It seems clear from the record that the substantially in excess of current prosperity phase of the last business cycle peaked out during the second quarter of 1960 when the Federal Reserve Board Index of Industrial Production reached a level of 110 (1957-100%). Since then there has been a rather gradual but steady decline in the over-all level of business activity as is reflected by such well known indicators as the Index of Industrial Production, new housing starts, and freight car loadings.

Accompanying this decline has been a significant increase in the percentage of unemployment, industry to move as rapidly as which rose from 5.1% during the is possible in the direction of first quarter of 1960 to 6.8% in automation. December and is yet higher today.

Our greatest economic problem - not only from the availability of now beginning to enter the civilian labor force.

This latter factor, of course, reflects the sharp increase in the birth rate which developed in 1941 and continued through the war and post-war years. The high birth rate of this period is certain to have serious implications for employment during the decade of the 1960s. On the basis of people now living, the productive age group (from 18 to 64 years old) will increase from 99.4 million in 1960 to 109.2 million in 1967-alnost 10 million new potential job seekers in seven years. One distinguished economist believes that check, if not to eliminate altogether, the ability of labor unions to exact annual wage increases from industrial management.

Current Economic Characteristics

Some of the more significant By general consent of our econo- economic characteristics of our present situation deserve mention. Most of our basic industries now possess productive capacity market demand. Certainly this is true in the case of such industries as iron and steel, non-ferrous metals, automobile manufacturing, building and construction materials, chemical products, oil and gas production, paper products, and even electric generating All industries face capacity. largest single element in the cost

ing price competition as witness gold standard entirely for more the electric products industry. In than a year and then returning turn, this price competition has to a limited gard builton standproduced narrowing profit mar- ard in a period of world-wide gins in industry after industry. datar shortages effectively re-In the light of this development moved that guardian from the and its obvious impact on per- door of government spending. share earnings, the recent upsurge in common stock prices is somewhat surprising. Perhaps factors other than per-share earnings are at work

Practically all of the business forecasters, both amateur and professional, believe, and again I agree, that the general level of business activity will continue to decline slowly through the first and second quarters of 1961. One well-known economic forecasting service estimates that the Federal Reserve Board Index of Industrial Production will work down from 106 for the last quarter of 1960 to 96 for the second quarter of 1961. An upturn is generally expected to develop about mid-year of 1961, but I know of no economist who expects that improvement to be other than mild and gradual for the balance of the calendar year. Certainly boom conditions are not expected, and again one wonders at current stock market evaluations.

I turn now from the current business forecast to a much more important consideration—inflation or the erosion of the purchasing power of the dollar. This is inthis influx will be sufficient to deed our most important economic of the war, that great accumulaproblem, and it has been for the tion of dollars was released to past 20 years, although it was compete for consumer goods largely unrecognized until the mid-fifties. The grave mistakes supply for several years. The inmade in the mid-thirties, when we were so confidently assured that pressure on commodity prices. 'we are now on our way" are now bearing the inevitable fruits which, with equal confidence, labor unions initiated the practice were then predicted by a very few, among whom I was one.

Inflation Inducing Developments

To bring the problem into focus, a bit of historical perspective will be helpful. For this purpose, I select only six developments, although many more could have been included, all leading in the However, evidence is conclusive same direction.

steadily rising labor costs, the est on the priority list is our voluntary departure from the gold in labor productivity, with the of production. This results from coin standard in 1933. The great result that operating costs and the monopolistic power of gov- value and protection to a nation product prices have been forced ernment-nurtured labor unions, a of a gold standard, whether it be situation which has compelled coin or bullion, lies in its auto- uct prices have rendered us inindustry to move as rapidly as matic restraint on the spending of public funds by politicians. Even with the limited gold standard on which we have been op-The combination of excess pro- erating since 1934, we are now The rise in unemployment results ductive capacity and rising labor seeing that restraint at work, as

Second, taking quick advantage of this situation, the first New Deal government spending programs were inaugurated. Initially, comparatively modest in the forms of such activities as PWA, WPA, and CCC, these programs have burgeoned over the years into the present maze of government spending agencies and, according to the Democratic Plat- if pursued steadily, the end result form of 1960, there are more to always has been the same and come presently. History affords always will be the same. Very no better illustration of permitting the proverbial camel's head to move under and into the tent of the national treasury.

Third, World War II, and to a lesser extent the Korean War, inthe military defense of the nation. Unavoidably, these expenditures economy was geared to war production rather than the production of consumer goods. With the supply of consumer goods narthe huge increase in purchasing power generated by military expenditures was, of necessity, saved, much of it in the form of Series E bonds. With the ending which continued to be in short consumer loans, etc. evitable result was sharp upward

Fourth, very shortly after termination of World War II, our of demanding and getting annual wage increases in the form both of direct rate advances and fringe benefits. In justification of these wage increases, unions have consistently contendthat the advances reflect nothing more than the improvement in worker productivity. that, in the aggregate, these pe-First to be mentioned and high- riodic wage increases have exceeded substantially the increase upward. In turn, our rising prodcreasingly less competitive with foreign based manufacturers.

Fifth, I would call your attenlittle debate. The general sense of of this Act has not yet been tested because we have experienced no real depression during the past 15 years. In the event of substantial and prolonged unemployment, however, the implication of this statute on Federal budget balance is obvious.

Sixth, should be mentioned the foreign economic aid and military assistance programs which have been relentlessly pursued by the Federal Government throughout the entire post-war period. It is doubtful that anyone knows the actual amount of money which has been expended in these pro-The Department of Commerce reports the grand total for the peoutlay is significant not only be-

costs has led inevitably to grow- will appear shortly. Dropping the gate of foreign dollar claims against the United States.

Two Types of Inflation

Two types of inflation are in clear evidence today and especially in the United States. In the current economist's vernacular, one is termed "demand-pull" and the other "cost-push."

The former is the classic type of inflat on which has plagued the world throughout recorded history. It has been attempted deliberately by central governments time and time again because, in the early stages it provides a false sense of economic prosperity but, simply stated, it means that there are too many purchasing power dollars pursuing the available volume of consumer goods and services, with the inevitable result that product and service volved enormous expenditures for prices are pulled up. In the case of long-continued and really serious inflations, this excess purcame during a period when the chasing power always stems from unbalanced central government budgets. In ancient days, government operating deficits were covered by the device of coin cliprowly limited, a large portion of ping, later by paper money issues against government bonds forced into the central bank, and in modern times, as in the United States, simply by borrowing in the open market. Growing government debt, of course, is usually accompanied by growing private debt in the form of mortgage loans,

> An inflationary situation resulting primarily from over-expansion of private credit can be combatted, if not restrained, by appropriate and properly timed central banking action. Restrictive credit policies can be adopted at the proper juncture and, over a considerable period of time, they can be expected to be effective, unless the central government continues a massive spending policy, which unfortunately is that which we witness today

The Second Type

The second type of arsured inflation is comparatively new and, at the moment, is primarily evident in the United States where labor unions abound and flourish under the protective aggis of the Federal Government. This is the "cost-push" type of inflation. As in the first type, this is not a theory, but an accomplished fact. This operation involves petion to the Employment Act riodic increases in total labor costs which was enacted by the Con- without any realistic concern for gress in 1946, and with relatively increased labor productivity, a major objective being the retenthis Act is that the Federal Gov- tion of current labor management ernment assumes responsibility in power. The net effect of these for maintaining full employment. periodic upward wage adjust-In other words, if the privately- ments is a steady upward push owned portion of our economy in operating costs. As these costs does not provide jobs for all who go up, product prices must be want work, then the deficiency pushed up proportionately, and as will be covered by Federally- our selling prices rise, we lose sponsored projects. The working our competitive advantage with our selling prices rise, we lose respect to foreign manufacturers. Already we have seen many foreign markets lost and even our home market invaded from abroad in a growing number of areas.

We have today in the United States both types of inflation and to an excessive degree.

Extent of Dollar Erosion

To indicate the extent of inflation and the erosion of the pur-chasing power of the dollar which has already been experienced, a few figures will be helpful. Assuming the purchasing power of the dollar in 1940 to have been grams, but all are agreed that the 100 cents, the present purchasing grand total is impressive indeed, power of the dollar is about 47.4 cents. The impact of this shrinkage in value of the dollar on reriod 1946 through June, 1960 at ceivers of fixed dollar incomes, \$105.4 billion. This tremendous pensioners and annuitants for example, is obvious. If an annuity cause of the strain imposed on of \$100 a month in 1940 was the Federal budget, but especially barely adequate for current needs, because most of this money was certainly the \$47.40 a month of spent abroad and therefore, to present-date purchasing power of that extent, added to the aggre- that same number of dollars is

Of equal importance, and especially to the older citizens of the nation, is the decline in the real value of fixed dollar amount assets acquired over the years. These assets include such items as life insurance policies, social security (O. A. S. I.), savings deposits, shares of savings and loan associations, and government and corporate bond holdings. In a study recently published by the American Institute for Economic Research, the aggregate purchasing power loss in these assets, accumulated through the period 1940-1959, amounted to an almost incredible \$183.3 billion. In view of what has happened and is still happening to the assets and the business future of such institutions as life insurance companies, savings and loan associations, and commercial banks. it is indeed remarkable that they have thus far initiated no really serious campaign to check the inroads of

Of greatest importance is the impact of gradual but longcontinued inflation on the psychology of the public. In the early stages of the disease, and this is really a long period (in our case, say from 1933 to 1955), little or no public concern is expressed. Indeed the early phases of an inflationary period are highly popular, as witness our national elections, because they coincide with an approved level of business activity. As the erosion of the purchasing power of the money unit deepens, a little public concern develops but this is brushed aside by political leaders and, unfortunately, by many economists. In the later phases, public concern increases very rapidly and unless the inflation is checked, quickly reaches frantic proportions. An illustration of this climactic stage is the German hyperinflation of 1921-1923.

As concern over the purchasing power of the money unit develops, increased efforts are made by individuals to protect the dollar value of their savings. These efforts take such forms as shifting out of holdings of bonds, time deposits, and even life insurance policies, although the latter always comes last for obvious reation, into foreign bank balances, real estate, gold, and even dia-

Preference for Stocks

Already we have seen, and for at least the past three years, a for common stocks rather than fixed income securities. Since September, 1959, the yields on high grade corporate bonds have been consistently higher than the yields on blue chip common stocks. Today the differential in favor of bonds is about 120 basis points, or 1.2%. There has been rencies, especially Canadian and Swiss, although the amounts are net yet great. In this connection, the Swiss banks announced several months ago, in an effort to deter the inflow of this hot money and to cooperate with the United deposits. This is indeed a departure from normal commercial bank procedures.

All that can be Washington 7, D. C., \$5.75. said is that unless something develops to re-establish public confidence in the dollar, that time will surely come. Already clear warning signals are flying.

Our basic difficulties are wage inflation and excessive government spending, especially foreign spending, and the only lasting solution will be found if major corrections in these areas are made. We should stop wage inflation, indeed, some wage deflation would be desirable, and we must cut government spending sharply by curtailing some existing programs, and eliminating others entirely.

directions will encounter stern erences to corporations and inopposition. Any such effort will dustries in financial publications and temporary, at least, unemployment for others. I believe that our choice today is simple: either we continue on with spending 26, Mich. programs for the benefit of our Housing vocal minority groups and a Community Chest approach to our international financial affairs, or latter, there will be many com- Census, Washington 25, D. The State of the Consumer

By Ernst A. Dauer,* Director of Consumer Credit Studies, Household Finance Corporation, Chicago, Ill.

An expert appraisal as to the "state of the consumer" anticipates: (1) higher-than-normal level of delinquency throughout most of 1961; (2) a modest increase in consumer credit outstanding as a percent of consumer income and an odds-on chance that the total may decline as in 1958; and (3) a further rise in consumer spending for services and total non-durables not materially affected in 1961. Mr. Dauer refers to various attitudinal surveys in observing that consumers "do" consider this a reasonably good time to make major durable goods purchases but he cautiously adds that they may be less than in 1960. The current delinquency rate, despite mounting unemployment, is found to be materially below that of the period between 1950-1953; and the debt burden has changed little in the past four years.

The recovery period which ended through October and by January in 1960 was the shortest on record had declined less than 1%. For of the postwar period. There is the year, 1960, as a whole, congood reason to hope that the re-

cession will also be shortlived and moderate. We have reached, or will very soon reach, the low point. Within three months or less the shift from inventory liguidation to net accumulation, and some reduction in the rate of unemployment,

Dr. Ernst A. Dauer

seems likely to occur. Business investment in plant and equipment has so far shown, and appears likely to show, only a very modest drop; an increase awaits business confidence in the profitable utilization of additional or improved facilities. Thus, while ing share of total employment in total private demand is still receding it, is clear that Federal, crease throughout 1960. A third state and local expenditures will continue to increase—as they have done annually since 1954.

When the upturn comes, progress will be slow. For the year as a whole, the output of goods and services will be about \$513 billion, 2% above 1960. By the end of the year, it should reach about

Consumer Income

July, 1960, it edged upward bility has resulted from several which had been built up for vir-

sumer income after taxes was a record \$354 billion - almost 5% more than in 1959.

In each of the postwar recessions, consumer income dropped only 1%. Income is being maintained as well this time. Such a maintenance of consumer income at a high level, in the face of a drop of 10% or more in manufacturing activity in the various recessions, results from several factors. Important has been the increase in unemployment compensation and other social insurance benefits. These increased at an annual rate of \$4 billion in the last half of 1960 and amounted to 7½% of total personal income in January. A second factor has been the dwindling share of total output represented by manufacturing, and the growing share of trade, service and government activity. Employment in service industries and government has been a growrecent years, and continued to infactor, in this and other recessions, has been the continued rise in wage rates year after year. Fourth has been the maintenance of dividend payments by corporations despite curtailed profits.

Consumer Spending

Let me point out at the outset that there has been a high degree of relationship in the postwar period between the amount of con-How has the consumer been sumer income after taxes and faring? Consumer income after consumer spending. In each year taxes rose constantly from the since 1951, except in 1955, con-Spring of 1958 through the mid-sumers have spent between 92.0% dle of 1960, interrupted only by and 93.1% of their income after

Third, the consumer have been accumulating material throughout this period has had a upon which to reach conclusions feeling of well being and a high with respect to consumer attidegree of confidence in his future. tudes and spending. The largest Almost every year he has looked body of data is that of the Survey back upon an improvement in his Research Center of the University status and has looked forward to of Michigan which has made surimproved personal prosperity. The veys of consumer attitudes and variations in the degree of that intentions to buy major durable feeling of confidence have ac- goods since 1946 and currently counted, in large part, for the does so quarterly. These were degree of fluctuation in spending which has occurred.

In view of the course of consumer income, it is not surprising The Bureau of the Census has that consumer expenditures increased sharply throughout 1959 beginning of 1959 which are curand the first half of 1960. They then rose only slightly during the

total consumer spending throughout the postwar period there has been considerable variation and a shift in its components. Spending ized in Newsweek. for services has increased in dollar amount and as a percentage of consumer income almost without exception throughout the post war period, rising from 28% in durable goods. Upper income con-1946 to 37% in 1960. Much of this steady rise can be attributed to the rising cost of such services. We can assume, therefore, that consumers will spend more in 1961 for services.

Consumer spending for nondurable goods is largely of a nonpostponable type. Although downgrading of expenditures for food, clothing and other items normally occurs in a recession, the dollar amount increased throughout 1960 except in the third quarter. Total spending for nondurables will not be materially

Consumer spending for durables has fluctuated essentially between 12% and 14% of income after taxes since World War II. It was below that range in 1946 when sion. durable goods were not yet available; soared above it in 1950 and in 1955. Since 1955 the percentage has dropped and fell below the range in 1958.

goods has shown the greatest variation. Once we had a dip during the steel strike. From taxes. This high degree of sta- satisfied the backlog of demand,

Consumer Attitudes

During the postwar period we published in the Federal Reserve Bulletin until 1959 and now are summarized in Business Week. made quarterly surveys since the rently published in the Federal Reserve Bulletin. Since February, 1958, the Conference Board has However, despite the stability of made bi-monthly surveys of consumer attitudes and buying plans, which it publishes in the Business Record, and which are summar-

It has been amply demonstrated that a variety of factors cause variations in consumer attitudes and in their purchases of major sumers are much more aware of and influenced by general business conditions. Middle income and lower income consumers are less affected by general business conditions, but become concerned about the unemployment which touches themselves, their fellow workers or their neighbors. Yet the U-2 scare, the collapse of the Summit Conference and the vast amount of debate with respect to business conditions and economic growth last summer jarred consumer optimism generally. This deterioration in optimism occurred without the shift to pessimism, however, which was generated by Sputnik, the wide publicity to layoffs, and the ultra pessimistic forecasts during the 1957 reces-

Available surveys last fall and through early January show some improvement in consumer attitudes and in intentions to buy durable goods, as compared with Thus, consumer spending for last summer. Nothing has occurred since, in my opinion, to cause them to deteriorate, with the possible exception of the highly sensational publicity given to the visit of the Secretary of Labor to certain areas of unemployment. Thus, I expect the consumer to continue to increase his spending for services, and to continue his spending for nondurable

> gone, most purchases of the common major durable goods arise and the formation of new households. For most of us, the purcar, or a better refrigerator, or television set, or new furniture from 1950 through 1953. competes with a trip abroad, a Household's figures longer vacation, a summer cot-tage, a boat, and the increased cost of tuition, room, and board at college. This is perhaps a good time to remind ourselves that the largest population increase in the next few years is coming in the 15-19 year age group. The higher consumption by teen-agers of food, clothing, telephone service, educational outlays and a variety of other things will limit replacement of major durable goods in the next few years.

Recent surveys indicate that consumers consider this a reason-

The surveys make it clear, also, that there is no such thing as a saturation of demand for major durable goods. Cracker Jack made famous the motto: "The more you eat, the more you want." The same is true of major durable goods. Those consumers who do not intend to buy a major durable good in the next three, six or twelve months still say that they would like to do so. They can still spontaneously list those major expenditures which they would like to make.

Consumer Credit, 1961

There will be ample credit available to finance the cars and other durable goods which consumers will purchase this year. The consumer's debt position is also not likely to be a deterrent, once the consumer's attitude is conducive to buying.

I would be considered negligent if I made no reference to the probable volume of consumer credit in 1961. If automobile sales in 1961 are unchanged from the 1960 level of 6.6 million cars, the total of instalment credit at the end of 1961 will be about \$46 billion, an increase of \$2.7 billion during the year. It seems more likely that automobile sales will drop to 6 million units and that other durable goods sales in 1961 will also be less than in 1960. If that occurs, there will probably be a net decline in outstanding instalment debt.

Consumer Debt Delinquency

It is appropriate at this point to raise two questions with respect to consumer debt: (1) How are consumers paying their debt? and (2) Is the present volume of debt a deterrent to the purchase of consumer durable goods?

The available figures with respect to delinquency on consumer debt are inadequate. The only comprehensive figures regularly available are those prepared monthly by the Instalment Credit Commission of the American Bankers Association. These cover the number of loans delinquent at major commercial banks, in each of the categories of personal loans, automobile loans, home appliance loans, and property improvement loans. From 1950 through 1956, the percentage of delinquent loans declined almost continuously year by year, with the exception of a modest upward movement in 1954. Thereafter, they continued to decline, but showed significant seasonal movement. During the 1957 recession they moved upward, but had regained what was practically their low point by the summer of 1959; the steel strike caused them to rise sharply and they declined slowly thereafter into the spring of 1960, never, however, regaining With respect to durable goods the previous low point. About 2% certain observations are appropriof instalment accounts are curate. With backlogs of demand rently delinquent, well above the low points reached in 1955 and temporarily regained in the sumfrom normal replacement demand mer of 1959. However-and this is most significant—the current level remains materially below chase of a new car, or a second the delinquency level of the early years of the last decade, namely

Household's figures show a somewhat similar movement. Since we operate in 45 states and throughout Canada and currently have loans outstanding to more than 2 out of every 100 families in the United States, it is inevitable that widespread unemployment would be reflected in our delinquency figures. During the 1958-60 recovery period, unemployment went below 5% in only one month and averaged 51/2 % well above the level of the previous recovery periods. Thus, our delinquency remained above the low levels which had existed prior ably good time to make major to 1957. The steel strike brought purchases. I understand that the experience among other consumer finance companies and among sales finance companies has been similar. Some sales finance companies have had a higher level of automobile repossessions than at any time in the postwar period. Their average dollar loss on repossessed cars has also been higher than usual because of the demoralization in the conventional used car LONDON, England—The sterling market brought about by the popularity of compact cars.

Since the rate of unemployment the upturn in general business conditions, it is reasonable to exmal level of delinquency throughout a good part of this year.

The Debt Burden

The unemployment picture is also significant in appraising the willingness of consumers to take on additional consumer debt. The chronically unemployed have been the very young workers, unskilled, rent recession, has occurred to a moderate proportions. large degree among the semiskilled and even the skilled workers in manufacturing. Those without high seniority have been chiefly affected, and this has included those groups which have have to improve a great deal been the most consistent users of more before the deficit is elimiconsumer credit. These have been nated and the surplus is earned the married men in the age group up to about 35 or 40, with children, with incomes from about money without further loss of \$3,500 to \$9,000 a year. They may become somewhat reluctant to take on new debt for the purchase however, whether the improveof durable goods to as great a degree as they did prior to the 1957 recession.

However, lest these remarks be construed in too pessimistic a fashion, let me point out that the total burden of consumer debt has changed very little in the last four years. Total monthly payments have remained at about 13% of total consumer income after taxes over this entire period. Available figures also indicate fluenced by the trend of the balthat about 12% of spending units have instalment payments which exceed 20% of their income. This is a relatively small proportion fied in taking some calculated and has changed little over the last four or five year period. Fur- Otherwise the best the longthermore, the proportion of fami-suffering taxpayer can hope for lies who believe that buying on is a "standstill Budget" with no the instalment plan is a good idea substantial change either way has increased steadily over the Even that would entail risk, as in last ten year period.

Housing, Mortgage, Banking And Personal Income Trend

By Dr. James Gillies, * Assistant Dean, Graduate School of Business Administration, University of California, Los Angeles, Calif.

Continuance of current trends in personal incomes and income distribution is held to reveal a favorable omen for housing construction, supply of mortgage funds, and general economic conditions. To this Dr. Gillies adds his doubts as to whether—unlike the recessions of 1949, 1953, and 1957—changes in mortgage money interest rates and terms will again stimulate a housing boom. He concludes that an upswing in personal income and not terms or interest rates will cause a similar response in housing if there are no extensive increases in housing prices. Based on an inference of average personal income reaching \$10,000 a year by 1970, the writer comes up with a tentative forecast of 2.2 million housing units a year for the next ten years-or, a doubling of 1950's rate of output.

Skeptical Cheaper Mortgages Will Work

facts. First, it seems almost certain that one of the most significant factors in pulling the economy out of the recessions of 1949, 1953, and 1957 was the tremendous increase in residential construction. The fact of the matter is that during the 1950's when the economy was most prosperous in terms of levels of industrial production, Gross National Product, etc. residential building declined and when the economy was something less than completely prosperous residential building increased. The reasons for this somewhat paradoxical situationmore houses were built when the nation was semi-prosperous than totally prosperous-may be found in an analysis of the cost of mortgage funds during these periods. However, in the current decline there is little evidence that changes in the terms and conditions under which mortgage money becomes available will in fact stimulate a great residential housing boom. At any rate there is more and more evidence that the demand for housing is not currently as susceptible to changes in interest rate and the 1950's. If this is so then it

Recognition of the Consumer

Secondly, the major economic Indeed, many analysts suggest and services, despite indications World War II year of prosperity) of recession. In many respects the consumer has been the "hero" of the current business situation. Perhaps more importantly he will continue to be the hero to a greater extent in the future, and therefore, if we are to achieve ments in the nation were estithe levels of growth that are anticipated, a fairly high level of conencourage consumer spending must be maintained. The implications of this conclusion is not that the consumer is once again an important element in the economy expenditures and incomes are significance lies in the fact that it heralds an increase in attention on the part of policy makers and analysts to the importance of consumer expenditure. Instead of focusing so much attention on the investment side of the economy, policy makers may once again consider consumer acivity as an important element to work with, considering means and methods of stimulating economic activity. In other words, tax policies may be as important as general monetary policies during the next few years in the arsenal of weapons used to maintain high levels of economic activity.

to

War II there has been relatively little change in income distribution. However, there are forces at work which indicate that there may be some change in the next ten years. First, social security payments, minimum wage laws, extension of coverage of unemployment benefits, etc. are raising the incomes of many families, regardless of their fitness for employment; second, the increasing amount of technology in society is increasing the productivity per worker and therefore increasing the capacity of industry to pay higher wages; third, the increasing complexity of our industrial plant is requiring greater skills for operation and therefore more and more people are taking additional training and education giving them greater earning capacity. Consequently, there will probably be an upward stift in the distribution of income with a higher proportion of total income payments going to the lower and middle income groups than was the case in the 1950's.

These changes have important implications for the housing and mortgage markets.

It is a well-known fact that many factors influence the volume of home-ownership in the nation. Clearly, the terms and conditions under which mortgage credit is available is a significant item in determining the volume of sales and in recent years this particular item has received a great deal of attention. During the sive, but people didn't buy befunds for equities or expectations of income sufficiently sound to development of this trend. make them good credit risks. Incomes and income expectations must not be neglected when ana-

Incomes and Home Ownership

this matter, however, is whet'er course, to suggest that as the gen-but by 1939 savings had increased primarily in savings and loan as-economy out of the recessionary er not there will be much change eral level of family incomes in- again to 2.9% of disposable in- sociations and a higher volume of situation. ten years. In other words will the automatic increase in homeowner- real sharp increase in savings Both these conclusions augur well top 5% of families in terms of ship. Indeed, if housing prices began. Between 1940 and 1941 for mortgage lending. As an aside, As mentioned previously, in the the past 15 years indicates that with the ability of consumers to well be tapped for a greater volperiod since the end of World real incomes are increasing and buy goods and services which ume of mortgage funds in the jected pattern of income payments for the next 10 years suggests strongly that basic forces will be at work to increase the demand for housing. If at an income of from \$5-\$7,500 a family enters the housing market, the fact that there will be an increase of about 15% in the number of families in this category augurs well for a substantial increase in the demand for housing. If by 1970 the average family income in the nation is close to \$10.000 a year, the proportion of homeownership in the nation should be much closer to 80% of all families than the current level of 60%. An increase of 20% in homeownership implies construction of at least 2.2 million housing units a year for the next 10 years as a minimum—almost a doubling of the rate of output during the 1950s.

It would be foolish indeed, to predict housing demand on such flimsy evidence of income change and income patterns. Obviously, the costs of construction, availability of credit, changes in tastes and habits will have considerable ments increased \$3.7 billion and influence. But, and this is the pension funds went up a staggermajor point, on the basis of existing evidence and past patterns of The distribution of these savings, development, if incomes increase of course, varies by income as predicted the volume of home- groups; the higher the income the ownership in the nation has a chance of rising from its current level of approximately 60% of all 1930s houses were very inexpen- families to nearly 80%. Perhaps an important challenge for the cause they simply didn't have lending industry is to find ways ard means of encouraging the

Associated with changes in lyzing the outlook for housing income and income distribution are changes in patterns of savings. As incomes rise the proportion changes, and it is generally a of home ownership also rises. In truism that as incomes rise savings also rise. What is true for the incividual is also true for the comes of over \$10,000-\$15,000 economy in the aggregative sense owned their own homes; 65% as demonstrated by the record of with incomes between \$5-\$7,500 savings through the years. ownership. But the experience of 16.6%. In 1947 as to be expected a rapid rate that they, too, may the past 15 years indicates that with the ability of consumers to well be tapped for a greater volwill continue to increase in the were unavailable during the war, future. next decade. Moreover, there is savings dropped to 4.7% of ina shift in income payments to come but as needs were met savsome of the lower income groups ings again increased and in the tive pattern of income distribuwho have not been in the housing entire decade of the fifties the tion in the next 10 years indicates market. Consequently, the pro- lowest amount of income saved that savings will increase. As a billion.

Sees Savings Rate Continuing

There is no reason to believe that the pattern of savings developed during the 1950s will not continue through the 1960s-that is about 7%, on the average, of all personal income will go into savings. As personal income increases. the volume of savings will also therefore increase.

Where do people place their savings? The obvious places of course are savings accounts, life insurance, government bonds, stocks and bonds of commercial enterprises, and investment in equities in real property. Considering the major areas of savings flow it is interesting to note that time deposits in commercial banks increased by about \$2.2 billion, shares in savings and loan associations about \$7.2 billion and holdings of U.S. Government bonds held by individuals declined by \$1.8 billion in 1959. Life insurance company premium paying \$7.9 billion in the same year. greater the savings and the higher the income the greater the proportion of savings in savings acccunts. For example, 43% of the families with incomes over \$10,-000 had savings accounts of \$2,000 and over but only 17% had U.S. than \$2,000 in value.

in the form of savings accounts, help speed the movement of the tain Street.

On balance, therefore, other things being equal, the prospecwas \$12.6 billion in 1950 and by result the supply of capital from 1959 personal savings were \$23.4 which mortgage funds must be drawn will also increase, and moreover, the distribution of savings held by individuals towards life insurance companies in the form of premium payments and savings and loan associations augurs well for the total supply of funds available for mortgage lending. This does not mean that there will be less competition for funds - indeed, it will remain high, but the funds will be there for the competitive person to go

The Near Term Changes

The long-run trends are reasonably clear, but what is likely to happen to consumer savings, expenditures and indeed income next year. Basically most forecasters see personal income in 1961 leveling off at about 2% higher than in 1960. The increase is predicted upon the fact that in spite of some unemployment in certain areas wage and salary rates are relatively firm and there is pressure from organized labor to raise rates in many firms. This increase is not substantial but it is significant. At the same time it is generally estimated that savings will drop from the 1960 level. In 1960 savings have been unusually high - about 14% above so that total savings in 1961 will drop about 8% less to the 1958 level of approximately \$24.4 billion. The increase in savings in 1960 was accounted for by Savings bonds amounting to more a sharp decline in expenditure for durable goods. In 1961 it is ex-The savings pattern, therefore, pected that these expenditures with reference to mortgage lend- will increase and consequently ing indicates that the prospective savings will decline. However, the As to be expected as incomes increase in average levels of in- decline will do nothing more than change the pattern of savings also come will lead to more savings stimulate business activity and

In summary therefore it is apparent that mortgage lenders must be aware of changes in income levels and distribution for a number of reasons. First, levels of consumer incomes have a marked effect on housing purchases; second, levels of consumer incomes determine levels of savings from which mortgage funds flow; third, patterns of consumer incomes determine levels of consumer expenditures which markedly effect levels of general economic activ-

The forecast of consumer activities and incomes indicate that if current trends continue the demand for housing will increase and funds will be available for financing the increase. At the same time it should be carefully noted that economic activity depends on a wide variety of factors; that consumer income levels are integrally linked with levels of investment, tax policies, mone-tary action, etc. Therefore, the analysis of just one aspect of the economy must at best be limited and tentative. Consequently, the conclusions of this paper must always be interpreted in the light of what happens throughout the rest of the economy.

The New Peace Corps

By Roger W. Babson

Asking that the Peace Corps be taken seriously, Mr. Babson explains why members should receive the equivalent pay of a second-lieutenant. Moreover, he suggests Congress be as financially lavish with the whole program as on the development of missiles or some newly discovered revolutionary weapon. Though quite aware of the problems the idea poses and in recruitment of personnel, Mr. Babson foresees its possibilities for success and its anti-war potentialities.

Our defense against World War with foreign aid is to be decided III may not be nuclear missiles or later. atomic submarines but rather something far more revolutionary, I refer to the Peace Corps.

Peace Corps Described

President Kennedy has sent a message to Congress on his proposed Peace Corps suggesting that 1,000 young and middle-age people be ready to leave by the coming Christmas. Among projects in the exploratory stage are work for surveyors, engineers, and geologists. Expert farmers and those acquainted with the use of insecticides and fertilizers are needed. Also in demand are carpenters who will get neighbors together, as in the old days, to erect houses and barns for one another. The headquarters at Washington tell me it has 25,000 applicants, al-though a majority of these cannot hope to meet the requirements.

Certain Requirements Must Be Met

The Plan will not be successful with non-paid volunteers. Whether or not these men and women are obtained by volunteering or by drafting, they must be under army discipline and subject to the same length of service as those entering the fighting ranks. They must be carefully "screened" as to loyalty, personality, and education. They naturally should fluently speak the language of the country to which they will be sent and be well trained for the character of work in which they will be engaged. Surely, the Peace Corps Personnel are entitled to the pay of a Second-Lieutenant.

To make this new Peace Army successful, Congress must be prepared to spend as lavisly thereon as it would spend on the development of missiles or any nuclear weapons. This new army should be taken very seriously and be placed under our U. S. Defense of the Peace Corps, although its personnel should be sent into a nation only at the nation's request.

Peace Corps and Defense Department

with the Civilian Conservation Corps organized by Franklin Roosevelt to give work to unemployed young men during the depression of the 1930s. In order to be successful, the Peace Corps must be carefully selected, organized, trained, and disciplined. It must be treated and financed as if some entirely new revolutionary weapon had been discovered which we must either adopt or we will be sunk!

Certainly all nations including Russia will be free to organize similar Peace Corps. I understand that Charles deGaulle is much in-terested. This development creates an entirely new and apparently overlooked situation. Would it be good or bad for the movement to have different Peace Corps of other nations working within a single nation such as one of the Latin Nations of Central and South America, including Cuba? Frankly, no one now knows. The whole idea is so new with such far-reaching possibilities and dangers. If several nations plan to send Peace Corps to a foreign country, surely the members of each will be able to talk with each other since they can speak the language of the country to which they are sent. If both men and women are accepted, this makes a further complication.

Would China Send Out Peace Corps?

nations. One more thought, what if China should decide to send Peace Corps into the United States? Perhaps all the above may cause President Kennedy, or at least Congress, to pass the entire problem over to the United Nations to operate. Knowing, how-ever, how slow the United Nations works, this may kill or delay the entire idea as now set up. I am strongly for the Peace Corps as set up by the present able leader, R. Sargent Shriver, Jr. It, however, has great possibilities and may be the one thing to head off World War III and save civil-

Technology Will Cope With Resource Deterioration

By Bruce C. Netschert,* Director, Washington Office, Boni, Watkins, Jason & Co., Inc.

Intensive analysis of factors bearing on the future supply-demand condition of our natural resources scores dismal spectre generally entertained which contends we face a likely physical exhaustion or prohibitively high economic cost of our basic assets. Researcher Netschert states he places his faith in modern technology, "not as a mystique, but as one of the shiny new facts of our era," to save us from physically and economically running out of vital resources in time. Pessimistic estimates are said to err because they are not weighted with the technological factor. Dr. Netschert deals with energy, non-fuel mineral, land and water resources, and conceives whatever technological blights may have occurred being cured by further advance of technology.

Activity

The President's recent message illustrates once again the increasing attention being given in this country to our present and future natural resource position.

The phrase "natural resources" is certainly a common one, but it meaning for us, but when we talk has, unfortunately, different about the entire earth's crust as a meanings to different people. The

usual understanding of the phrase is in terms of materials: the natural stocks of minerals in in the ground; our forests as a source of lumber; our water supply for household, industrial and agricultural use, and for

Bruce C. Netschert

power; and the land, in the sense of the productive base for agriculture. This is the usage in the Presidential

message. But natural resources can also be viewed more broadly. Land is a natural resource in the sense of space on the earth's surface; it is the resource on which we build our cities and suburbs and it is also the resource to which we turn from them for recreation, providing us with the esthetic values of scenery and wildlife as well as the more utilitarian pleasure of hunting. The water in our lakes and streams is also a recreational resource, providing bathing, boating and fishing. For minerals our natural resources constitute not only the deposits currently being exploited, but all the potential sources from which we could, if we wished, obtain various mineral materials. They include the earth's crust it- technology. We are aware of what

And yet there is still more. The

broadest sense, our entire earthly economic in the future should not environment; both the animate be disregarded. and the inanimate, the living and non-living, above, below, and still inadequate and the process around us.

poetic than it was a few years sibility of future mastery of this ago, and it is getting less so all 1 Erich Zimmermann, Conservation in the time. Nevertheless, it is true the Production of Petroleum, P. 7.

Natural Resources and Economic that since it represents natural resources taken to the limit, the absolute sum total that we have to to Congress on natural resources draw upon, it may in some instances have no immediate or imminent significance for us. When we refer to scenery and wildlife we are talking about the environment with immediate source of minerals, or the oceans as a source of fresh water on a large scale, we must retreat to the harsh world of economics, where costs set the limits to what is immediately or imminently sig-

Some, indeed, have taken this approach exclusively, and consider that resources exist only if they have functional significance. Zimmermann, for example, considers that the physical substances in nature "are 'neutral stuff' until man (1) becomes aware of the substance, (2) learns how to make use of it, and (3) develops ways of making the substance available for use.

Now this difference of opinion over the use of the term "resources" has elements of semantic quibbling in it. What does it matter, one may ask, which meaning is used as long as it is clearly stated? There is more to it than that, however, as I hope to make apparent in the course of this paper. To Zimmermann, the iron ore deposits under the feet of the Indians roaming the Mesabi country were not resources, since the Indians were not even aware of this wealth, and couldn't

fact that we have something the Indians didn't have - modern exists in nature, even if we're using it. It inresources, the common clay found in all too many places; but it also includes the bauxite deposits that currently supply us with alumin-

Within the environment the various natural resources are present in widely varying conditions and circumstances of occurrence, which provide a range, or spectrum, of availability. That is, some resource occurrences may be readily available for exploitation, whereas others may necessitate the application of advanced technology for their use. Some land, for example, may be ready for the plow as it stands; other land may require elaborate irrigation works before it can be cultivated. A mineral deposit may be of rich ore, requiring relatively simple processing; another may consist of lean ore, or a complex mineral assemblage, requiring highly involved metallurgical techniques for processing. The level of technology thus determines what portion of the resource spectrum is economically exploitable at any given time.

But the level of technology is not constant over time. We are being made increasingly aware that technology grows and progresses, as it builds on itself. With ticularly evident in the field of creased through technological
respect to the availability of reenergy resources. Coal, oil and
progress. sources, technological progress may have two effects: (1) Resources already economically all are fuels that can be burned available may become available at being uneconomic to exploit, may energy. become economic.

2 The specific terminology employed in this approach is as follows: "Reserves" are the known natural stocks of a mineral raw material that are available under current technological and economic circumstances. The "resource base" is the total stock afforded by the environment, including both discovered and as yet unaware of this wealth, and couldn't have used it if they wanted to, aside from negligible use for pigment.

Technology as a Creator of Resource Availability

But to apply this same approach to the modern scene overlooks the fact that we have something the scene overlooks the fact that we have something the scene including total stock afforded by the environment, including both discovered and as yet undiscovered quantities, and regardless of the feasibility of exploitation. "Resources" are that portion of the resource base, including reserves, that seems likely to become available given certain technological and econemic conditions. (See S. H. Schurr, Bruce C. Netschert, et. al., Energy in the American Economy, 1850-1975 [Baltimore; Johns Hopkins]

In Proxy Contest-

How Vulnerable Is Your Company to Proxy Contest?

By Joseph Duff Kelly, Duff Kelly Organization, New York City

Close-up of proxy contests, from their inception to their finis, shows: who starts them, the reasons for and the situations which invite such maneuvers, and how to correct vulnerability. Mr. Kelly has been on both sides of contests at one time or another where he has helped either dissidents to mount the attack or managements to defend themselves. In relating the lessons learned, he stresses the importance of professionals. "Proxy contests," he says, "cannot be conducted successfully by amateurs."

This is the season of the annual contests which have accomplished meeting, when management puts the ever widening distribution of on its finest array and the voice of corporate securities have inthe stockholder is heard through- creased the susceptibility of many out the land. It also is the season companies to fights for control. of proxy contests when management frequently must defend its tions in many management minds stewardship against those who seek to replace it.

defended their right to continuity; 36 lost and 11 others remained only after negotiation and compromise. These figures, from the records of the Securities and Exchange Commission, do not in-clude scores of contests in unlisted companies whose fights for control do not come under SEC rules necessary to determine vulner- dollars. and regulations, and where no holds are barred.

So far this year, publicity has been given to some eight contests for control. Alleghany Corp. and National Theatres & Television, Inc. are in the midst of proxy fights. Endicott Johnson and Chrysler Corp. were threatened, but the opposition subsequently withdrew. The threat against Chance Vought Corp. appears likely to be concluded in a merger with Ling Temco, Inc. However, Goldfield Consolidated Mines, Co., Martin Company of Texas and United Industrial are currently threatened with contests at their annual meetings.

Last year (fiscal year ended June 30, 1960), the Securities and Exchange Commission had recorded some 25 proxy contests of which management won 21, the opposition three. One was negoti-

The accompanying list of contests for which management and SEC includes three companies, Capital Airlines, H. L. Green & which contests were scheduled at both special and annual meetings. Neither the Capital Airlines were held for lack of a quorum. The special meeting of Industrial Rayon was to approve a proposed

They have also raised the quesof how vulnerable their company is; of how vulnerability may be During the past six years, man- determined with some degree of agement of 136 listed companies accuracy; and what constructive the state law too late. steps should be taken to strengthen management and to lessen the possibility of a contest.

Further on in this article there is a series of questions which will give a rough idea of vulnerability. We say "rough" because an analysis of each situation would be ability with any degree of ac-

Proxy-Prone Factors

First, let us discuss some of the factors which make certain companies targets for proxy contests; what kind of people insurgents are; and what action has been taken so far this year by companies faced with fights for con-

Most likely candidates for control fights are those companies in which management has small personal holdings and which have experienced a decline in earnings, or a reduction or omission of dividends. These are choice situations for the insurgent who sees in them an opportunity to gain control with a minimum investment and to support his campaign against management with "facts."

Second most likely source of proxy fights are those companies which have split management, dissident directors or unhappy the opposition filed 14Bs with the stockholders. Of course, companies which have cumulative voting are always subject to dissident groups Co. and Industrial Rayon, for of stockholders who seek representation on the Board of Direc-

To stop or to offset a proxy nor H. L. Green special meetings fight, it is necessary to understand what encourages such contests and the people who conduct them. Even before that, it is wise to merger which was not consum- analyze one's own company to determine whether it is suscepti-The growing number of proxy ble. This analysis should be un-

dertaken only with the aid of professionals.

This is probably the most opportune time to point out that a proxy contest is no place for amateurs. In making that statement, we include lawyers and public relations people who have had little or no experience in such contests. To support it, let us cite two proxy fights last year.

Two Rueful Examples

In a large mid-Western contest, one group lost largely because its public relations people did not fully understand timing and the presentation of material to independent stockholders. In another contest, the insurgents came into a special meeting with a majority of the votes, but lost because they did not have more than 50% of the total outstanding stock, a requirement in that state for those who call special meetings to replace the Board. The attorney, in his first proxy fight, discovered that clause in

These are but two of many examples where mistakes have been costly. To realize how expensive proxy contests can be, consider this: A proxy contest in a small company today runs upwards of \$25,000 for each side. Larger ones can run to more than a million

Management has the company's treasury to back it, but an insurgent group usually has to win to regain its costs. When the opposition wins, it invariably asks for and receives reimbursement of its expenditures. For example, after gaining control of New York Central, the opposition group, headed by the late Robert R. Young, estimated expenses at \$1,308,000 for which the railroad reimbursed

Because insurgent groups must win to get their money back, or at least to be sure of it, they rarely enter a proxy contest without the aid of a team of experts.

In analyzing a company to determine its susceptibility to a proxy contest, the professional will want to know how much stock management controls; who the large stockholders are and whether they are friendly to management. Next he will study the list of stockholders and the transfer sheets to see whether there has been any recent accumulation of shares. He will also compare the amount of stock held by individuals with that held in brokers' names. He knows that individual holders tend to favor management whereas stock held in "Street" name is more easily influenced by opposition groups. By using certain ratios, he can estimate the susceptibility of the company to a proxy fight; in other words, how much stock an insurgent group would need to become a real threat. He can also suggest numerous ways to strengthen management's control.

There are other factors to be weighed, such as the company's community and labor relations and occasionally they will outweigh other considerations. For example, the attempt of the Glen Alden group to buy control of was thwarted by management's appeal to employees and the community for help against "outsiders." Excellent labor and community relations, built up over for management which was sufficient to discourage the opposi-

The Department of Justice subsequently announced it was investigating the situation. As this story is written both companies have announced a joint plan of merger which, if

to Chance Vought's first plan to ask protection of the anti-trust laws (no two cases are exactly side. alike), Union Oil Co. last year charged that Phillips Petroleum Corp. was violating the anti-trust laws by seeking to increase its large holdings in Union. The Attorney General's office entered this contest and ordered Phillips to divest itself of the Union stock.

approved by stockholders, would

prevent a proxy contest.

The foregoing contests are not proxy fights in the strict sense since the people seeking to take over apparently are willing and able to buy control outright. However, they do indicate the numerous avenues open to reto retain control.

Management Has the Advantage

In a proxy contest, management starts out with many advantages. done business with a company usually remain loyal to management, if only for selfish purposes. Endicott Johnson earlier this year They often can and do influence blocks of stock. Management can also delay giving a list of stock-holders to the opposition, thus hampering the insurgent group's analysis and strategy as well as a period of years rallied support adding to its costs. Last September, the Murchison group, which seeks to replace Alleghany Corp. management at the forthcoming annual meeting, asked the courts tronics Inc. sought control of to direct management to turn over a list of stockholders to them. (1) an offer above the market to After numerous motions pro and other stockholders; (2) acquisition con, the right of the Murchisons of Chance Vought stock in the to the list was confirmed by the open market, and (3) possibly New York Court of Appeals on March 3, five and a half months

This writer has been in a number of proxy contests, sometimes with management and sometimes with the opposition. In thinking back, he has never known a proxy contest where one side was absolutely right and the other side completely wrong. However, he has never participated in one In a move somewhat similar where, during the heat of the contest, he has not been incensed by the unfairness of the other

Insurgent Groups' Make Up

Actually insurgent groups, like most other groups of individuals, are made up of all kinds of people. Some are headed by dissident directors, who, in good conscience, believe that management policies are not producing the potential of which the company is capable. Others are stockholders with large investments in the company who are disappointed with the lack of growth or of dividends. Still others sincerely believe that if sourceful management in its fight they gain control, they can turn a company from a loss to a profit. Finally, there are those who are interested solely in what they can get out of a company. Their policy, too frequently, is "economy by firing" and "profits by liquida-Bankers and brokers who have tion." Luckily, there are few of the latter.

> A proxy contest is similar in many respects to a political campaign. The little stockholder, who heretofore has been ignored, suddenly discovers that the whole contest is being conducted solely to protect his investment. Bombarded with letters castigating the other side and importuning him for his proxy, he, more often than not, is simply confused. As a result some stockholders sign every proxy they receive from both sides, while some refuse to sign

Says W. A. Kissel, head of the Kissel Organization, New York City, a top proxy solicitation firm:

"The only tactical advantage the opposition has is the surprise element. If management keeps alert and maintains strong relations with its stockholders, it will deprive insurgents of even that advantage. However, our biggest complaint is that we are frequently called in on too short notice and by a management which is already panicky.

A proxy contest takes timeactual physical time to analyze, of these questions are "No," manto develop strategy, to prepare letters to stockholders, to have the material cleared with the SEC, to have it printed and mailed. It also takes time to contact stockholders personally. Like everything else, the difference between success and failure in proxy contests is often little more than

of the proxy wars, Herbert A. Einhorn, co-author of the definitive book, Proxy Contests for Corporate Control, and a senior partner of the New York law firm Aranow, Brodsky, Bohlinger, Einhorn & Dann, says:

"Unfortunately, too many managements have indicated their propensity for bad timing. In contemplating a proxy contest, management's moves and counter moves will depend to a certain extent on those of the insurgents. However, it should be able to anticipate many of these and to formulate a program and strategy of its own. It should always seek to keep the initiative and it should never make the fatal mistake of 'too little, too late.'

"Paramount in management's experience, it is clear that proxy for non-members.

How Vulnerable Are You?

NEWS ABOUT BANKS AND BANKERS

Consolidations . New Branches . New Offices, etc. . Revised Capitalizations

Scofield have been appointed Vice-Presidents in the personnel department of The Chase Manhattan Bank, New York, David Trust Company, New York. Mr. Rockefeller, President, announced

Mr. Coburn is in charge of the bank's training staff. He joined the bank in 1928, was apopinted an Assistant Cashier in 1949 and was promoted to Assistant Vice-President in 1956.

Mr. Scofield joined the bank in 1924 and is Manager of the employee relations department. He was appointed an Assistant Cashier in 1942 and was promoted to

Other promotions were Arthur S. Condit, Jr., to Assistant Vice-President in the trust department and David E. Lynn. and Richard A. Cantor, Frank D. Lackey, III, George G. Meredith, and Gary E. Weiss to investment officers in the trust department.

The 10th Puerto Rican branch of First National City Bank, New York, opened April 10, in the New Port section of metropolitan San Juan. The branch is located in two 53' x 10' house trailers, joined side to side, until permanent quarters can be erected.

New Port, located across the bay to the Southeast of old San Juan, promises to become the industrial and shipping hub of the island. Under the direction of the Puerto Rican Government, the former low-lying swampy tidelands of New Port are being filled and converted into industrial sites and dock facilities. The modern waterfront planned for New Port will speed both imports and exports by eliminating long-haul trucking through the streets of San Juan to reach the present dock facilities.

Joaquin E. Nieves has been placed in charge.

Federal Shell Securs. Offered

Pierce, Carrison, Wulbern, Inc. heads an underwriting group which offered on April 12 in 135,-000 units, common stock, convertible subordinated debentures and warrants of Federal Shell Hones, Inc. Each unit, priced at \$20. consists of five shares of common stock, one 9% convertible subordinated debenture due April 1, 1981 and one 1964 warrant. The debentures, shares and warrants included in the units may be transferred separately imme_iately after the units are sold.

Net proceeds from the sale of the securities will be added to working capital to be used for general corporate purposes, and to increase mortgage notes receiv-

able. Each debenture is convertible into two shares of common stock at the option of the holder prior to April 1, 1966. The warran's expire April 1, 1964 and entitle the holder to purchase as a unit, two shares of common stock and one 9% convertible subordinated debenture due April 1, 1981, at a

unit price of \$14. Federal Shell Homes, Inc., Tallahassee, Fla., builts shell homes in Mississippi, Alabama, Georgia and Fiorida. The company formed a wholly-owned subsidiary in Puerto Rico in Fabruary, 1961 and is currently offering homes in that territory. The homes are built of wood on land owned by the purchaser and are completed externally with roof, paint, doors, windows, screens and trim. The interior is uncomplete! except for flooring, celling jo sts and partition and closet studing.

In the seven months ented Dec. 31, 1960, the company had gross sales of \$831,165. Upon completion of current financing, outstanding capi alization of the company will consist of \$1,350,000 of 9% convertible subordinated debentures due April 1, 1981; \$93,049 in various notes; 1,137,000 shares of common stock; 135,000 warrants which expire in 1964; and 113,700 stock purchase warrants.

Fox-Martin V.-P. of Hugh W. Long & Co.

W. R. GRACE & co. reports on 1960

Earnings for 1960 of \$16.2 million were slightly below 1959. However, chemical profits were up 11%, the third consecutive year of higher chemical sales and earnings. Chemicals accounted for over 75% of pretax operating earnings. This improvement reflects the new products resulting from research as well as the increased capacity and efficiency generated by the \$100 million expansion in chemical facilities over the past five years.

In the growing packaging field, Cryovac bags and films as well as a wide range of sealing compounds give Grace an important world-wide position. In plastics, the capacity of our polyethylene plant is being increased and sales continue to rise sharply. Cosden Petroleum Corporation, 53%-owned subsidiary, has also expanded in chemicals. The demand for agricultural chemicals has also risen.

Earnings increased from our diversified Latin American business. However, difficult conditions continued in the shipping industry and Grace Line operated at a loss for the first time since 1932. We expect improvement in this situation.

In our Libyan petroleum operations, in which we are associated with Standard Oil Company (New Jersey), and Texas Gulf Producing Company, two successful wells in an entirely new area were brought in during 1960.

... marked rise in

chemical sales

and earnings

ern is conservative by pipeline standards, the equity ranging between 30% and 33%. Sale of \$20 million of debentures in 1960 raised the debt ratio to 57% of total capitalization. Assuming the entire \$85 million expansion program (including the extraction plant) is undertaken this year, about \$65 million of financing would be required. While much of the program can be financed with senior securities, some form of equity or a convertible issue might be required. The timing of such sale would of course depend on the speed with which the FPC authorizes construction of projects now pending before them.

In common with practically all other pipelines subject to FPC regulation, Northern has entered tion furnaces. This sale will con- advantage over competing fuels necessitated by the increasing into fixed income issues. stitute an important supplement as natural gas There is, however, little reason to expect any further pressure, so that pipeline earnings may once one of stability of earnings.

Adjusted for the recent rate orders, Northern Natural earned about \$2.15 for 1960 and could earn about \$2.20-\$2.30 for 1961 before any dilution from sale of equity. The dividend rate was raised to \$1.40 in mid-1960 and represents about a 65% payout of earnings. At the present price of 36, which is the high for the year, the shares are selling at about 16 times estimated 1961 earnings and are in line with comparable pipeline equities. The forth at times in the World War

1960 Best operational year

for GULF OIL

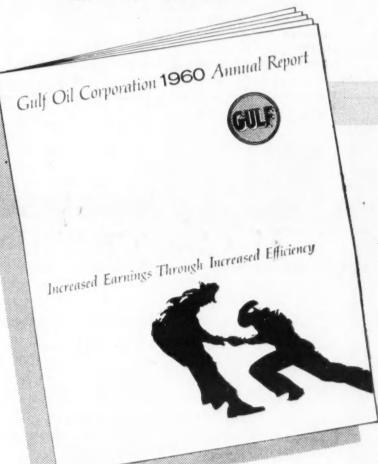

Gulf's 1960 Annual Report, recently mailed to shareholders, records net earnings of \$330,310,825—an increase of 14% over the previous year.

Contributing significantly to earnings were the Company's domestic operations which brought in \$198 million or 60% of total net income.

In all major scopes of activity, new records were established. World-wide, production was up 12.5%; crude oil processed rose 11%; and sales of refined products showed a 2.8% gain.

Financial and operating highlights of Gulf for 1960 and 1959 appear below.

If you'd like a copy of the complete Report, write to: Public Relations Department, Gulf Oil Corporation, P. O. Box 1166, Pittsburgh 30, Pa.

strength, such as Kansas City Life at \$1,400, or pay up in five figures for a renowned holding company equity such as Christiana Securities. There is no industry that you might wish to invest in, that is not represented in the Over-the-Counter Market.

Dynamic Newer Industries

For example in recent years there has been great enthusiasm for leisure time companies. Look at the part the Over-the-Counter Market has played here! In bowling there's Sports Arena, Inc. operating a big chain of alleys, American Bowling Enterprises, American International Bowling, Bowling Corporation of America, and Bowl-Mor, a company manufacturing automatic pin-spotters. The stocks of all these are unlisted.

Publishing companies, catering to leisure time devoted to reading and education, have been sensational performers in the past year, and some of the brightest stars in this field shine over-thecounter. Time, Inc., the New Yorker, Western Publishing, Random House, Macmillan, Scott Foresman & Co., Ginn & Co.—all these are unlisted but by no means listless securities.

It used to be that investment in real estate was confined to men of wealth, syndicates or closely held corporations. In the past three years, however, many opportunities have opened up permitting individuals to participate in realty projects through ownership of low priced shares. There's Arvida, a big Florida Land Company, Investors Funding Corporation, a sophisticated and successful owner and operator of land and income producing property in the New York Metropolitan Area; DISC Inc. shrewd owner and operator in extensive and expanding land holdings in the Washington, D. C. area, in Florida and California; Futterman Corp., Glickman Corp., Uris Building Corp., and Holiday Inns, Inc., a major motel chain. Plenty of real estate here, with each and every equity available only in the Over-the-Counter Market.

The magic and the money in the word "electronic" are now legendary. The list in this industry from which to make your selection in the counter market is a fabulous one: High Voltage Engineering, Epsco Inc., Foxboro, Electronics Capital, Electronic Associates, FXR, Milgo, Radiation, to name but a few. In automation and computing there's Farrington, Itek, Soroban, Computer Systems, Automatic Retailing Company of America. All of these interesting, even exciting equities, and dozens more are very busy animating and activating the Over-the-Counter Market.

In finance the OTC market has almost a monopoly. No operating commercial bank or operating life insurance company stock is listed on any exchange and the same is true of most fire and casualty company shares.

One of the dynamic phases of the securities market in recent years is the volume of new issues. Now every single one of these starts off in the Over-the-Counter Market and, if you want to be an original or early subscriber, that's the only place where your order can be filled. Some of these fairly recent new issues have performed dazzlingly. Automatic Retailing was first publicly offered at 165% in February, 1960. It sold recently at the equivalent of more than 100 (after a 2-for-1 split). Western Publishing gained 30 points three months after issuance. Loral during its tenure in the Counter Market rose from \$12 to over \$100. Itek went from \$4 to \$340 in two years (1957-58). In fact, some of the most interesting market gains of the past two years have been scored by those investors who subscribed to or bought early, the right new issues-Over-the-Counter.

One of the most impressive and recurrent phenomenon of corporate finance has been the steady forward march of hundreds of corporate shares from first issuance at low prices, to broad investor acceptance and recognition, and major price advance in the OTC market. This forward motion has, in many cases, led to later listing of issues on major exchanges where their luster has grown still brighter. But they all started out Over-the-Counter and 40,000 different issues

have never left it.

Immediately following this brisk review of the OTC market you will find a tabulation of some of the finest and most seasoned securities available anywhere — issues of companies — in many cases leaders in their respective lines — which have paid cash dividends without hiatus for as many as 176 years in a row. If you seek diversity, your choice is panoramic. There are bargains here, too-unnoticed "sleepers," growth stocks, and issues selling at sharp discounts from book values. Whether you're an odd-lot buyer or a major financial institution, the Over-the-Counter Market is an indispensable department store for security shopping.

So, as we've been saying twice a year for more than a decade, "Don't neglect the Over-the Counter Market." These words of advice are splendidly documented by the following list of durable

and dependable cash dividend payers.

Difference Between Listed and Over-the-Counter Trading

Following the tables appearing hereunder, we present a discourse on the difference between the listed and Over-the-Counter Market, for the benefit of those who are not conversant with how the Over-the-Counter Market functions.

Treasury Market Data Available On Weekly Basis

The first of a new set of weekly releases on the government securities market, developed under a joint Federal Reserve System-Treasury Department program, was issued March 30 at the Federal Reserve Bank of New York. The Bank will now publish composite closing bid-and-ask prices for U. S. Government securities daily, and each Thursday at 4 p.m. will release weekly statistics on the volume of transactions, posi-tions, and financing of government securities dealers.

The new statistics program should make possible a wider and better understanding of the operations of this market, which, in turn, should contribute to the effective functioning of the government securities and related mar-

The initial releases included a compilation of the gross volume of dealer transactions, weekly from September, 1960, through March 29, 1961, and total dealer positions and financing from September through March 1. 1961. According to these new statistics the daily average volume of gross dealer transactions in recent weeks has fluctuated between about \$1.2 billion and \$1.7 billion. During the first week of March total dealer inventories averaged about \$2.6 billion, with securities maturing in less than one year accounting for \$1.9 billion of this total. Dealers obtained about two-fifths of the funds needed to carry these inventories from commercial banks and a similar proportion from business corporations. The remainder was supplied by the Federal Reserve System and other elnders.

Inquiries about these new statistics or requests to be put on the mailing list to receive the new releases should be addressed to:

Market Statistics Department Federal Reserve Bank of N. Y. New York 45, New York

it PAYS to keep YOUR relations HAPPY

Some companies are handicapped by their shaky relations with the very people who should be most useful to them, in terms of respect, broader markets, steadier growth in earnings.

Such companies only need to sell themselves, as well as their products, by making known the quality of their management, and the soundness of corporate progress, research, purpose, vision, viewpoint. The tool for this job is already at hand -

Your Annual Report!

The "public" that should be covered by "public relations" includes present and potential shareholders, financial analysts, institutions, the press, top business executives, the alert man in Main Street (and wall Street) and key employees.

What you tell these important people about your organization can make a vital difference in your future sales, labor relations, competitive position and

Our firm for years has been making corporate Annual Reports travel farther, more widely, more profitably. We do this by well-aimed and attractively

designed Annual Report advertisements, by the effective use of selected mailing lists, and by news releases prepared by specialists on our staff.

Use our facilities and experience in capitalizing your next Annual Report. Let us work with you now, so that your program will be ready to roll as soon as your Report is off the press. Write or call for our booklet -

"The Total Corporate Impact."

Announcing

Western Power & Gas Company

A new name for long-established operations

Southern Colorado Power Company is to be merged into Central Electric & Gas Company effective May 1, 1961, and use of the new name of Western Power & Gas Company will begin on that date.

April 28, 1961, will be the record date for common shareholders of Central Electric & Gas Company entitled to participate in the 6-for-5 stock split, which will be made coincident with the merger. All stockholders of both Central Electric & Gas Company and Southern Colorado Power Company will receive a detailed letter at a later date.

Combined plant and property accounts at December 31, 1960, including telephone subsidiaries.....\$174,380,000

Combined operating revenues for the year 1960, including telephone subsidiaries......\$60,019,000

Total customers at December 31, 1960, including company-owned stations of telephone subsidiaries 470,516

We are pleased to announce that the Boards of Directors of the subsidiary, Central Telephone Company, and Southern Nevada Telephone Company (with 53,000 company-owned telephones in the Las Vegas and Boulder City area) have agreed to recommend merger to the shareholders of the respective companies, subject to certain conditions.

Inquiries are invited and should be addressed to Judson Large, President, 120 South La Salle Street, Chicago 3, Illinois.

Extends Exchange

Westminster Fund, Inc. has extended to June 12, 1961 its offer to investors to exchange shares of its capital stock for their securities in selected quality companies, particularly those with good growth potentials.

Kidder, Peabody & Co., dealermanager of a group making the exchange offer, has set up a special department to handle inquiries and other details.

The fund has been organized to provide to investors owning large blocks of securities an opportunity to diversify their holding without incurring Federal capital gains tax liability on the exchange. By exchanging their securities for shares of the fund, investors will become participants in a securities portfolio which will have the benefits of diversification and experienced professional investment management.

The investment objective of the fund is to seek possible long-term growth of capital and income. It is expected that the assets of the fund will be largely invested in quality common stocks of companies which are believed by the managements to have good growth potentials, but there is no requirement that the fund invest in common stocks exclusively. The fund's charter permits investment Inc., is President of the fund. in preferred stocks, corporate and obligations of any is investment advisor to the fund.

Are Marketed

It will be the policy of the fund Public offering of \$35,000,000 The each year to distribute to share- Flintkote Co. 45% sinking fund debentures due 1981 was made on April 7 by a group managed by ply with special provisions of the Lehman Brothers. The debentures are priced at 100.375% plus accrued interest, to yield 4.596%.

Sinking fund provisions require Flintkote beginning April 1, 1966 through April 1, 1980 to retire \$1,750,000 debentures annually, an amount which at the option of the company may be increased to a maximum of \$3,500,000 annually The debentures are redeemable for sinking purposes at prices ranging from 100.31% to 100%. They are otherwise redeemable at prices ranging from 105% to 100%, except that the debentures fundings with other indebtedness having a lower effective rate of interest

Of the net proceeds received Investors Management Co., Inc. from the offering, approximately \$28,000,000 will be used in connection with a proposed asbestoscement pipe plant, a gypsum board product plant, gypsum rock conveying and dock facilities in New Foundland, Canada, and a cement plant now under construction at Redding, Calif. The balance of the proceeds will be used for payment of a \$1,650,000 outstanding promissory note due March 15, 1968 and for general corporate purposes.

Flintkote is engaged directly or through subsidiaries in the manufacture, mining, distribution and sale of various products for construction, industrial and consumer uses. The company is one of the largest domestic producers of a diversified line of materials used in construction, renovation and repair of residential and industrial buildings and roads and is a producer of paper products and corrugated containers. The company has 12 principal sales offices in the United States and maintains district sales offices and warehouse facilities at 30 locations in the United States. There are four principal foreign sales offices located in Canada and one in London, England.

Borman Food Stock Offered

Shields & Co. made a secondary offering on April 12 of 67,000 ran. shares of Borman Food Stores, Inc. common stock at \$39 per share. The shares were purchased by Shields & Co. from selling Sutton, Inc., 250 West 57th Street, of Schreiber, Dail and Co., 315 stockholders and no part of the New York City, has been changed proceeds will be received by the to Fish Securities Corp. company.

Borman Food Stores, Inc. was incorporated in Michigan in June, 1950, and presently operates a retail food chain of 58 super markets in southeastern Michigan under the trade name "Food Fair." All stores in the chain are selfservice cash-and-carry super markets. The company sells both nationally advertised brands and its own private brands. Forty-five of the company's present stores were constructed within the last ten years and designed specifically for super market operation. It has been and is the company program to increase the number of its super markets in the Detroit area. According to figures assembled and published by the Detroit News Co. for the 1959 calendar year Borman Foods was the fourth largest chain in Detroit in total volume of sales.

Sales for the 26 weeks ended Dec. 24, 1960 totaled \$59,659,503 and net totaled \$1,051,679, compared with sales of \$44,905,565 and net of \$734,179 for the like period in 1959. For the fiscal year ended June 25, 1960, sales totaled \$98,390,164 and net totaled \$1,735,-338 compared with 1959 fiscal year sales of \$78,744,231 and net of \$1,433,267. During the 1960 fiscal year the company operated 56 stores compared with 37 stores in the 1959 fiscal year. The company is now paying quarterly dividends of 20 cents per share. On Oct. 10, 1960, the company paid an additional 3% stock divi-

Capitalization of the company at Dec. 24, 1960, included \$476,082 in debt and 1,205,553 shares of common stock, \$1 par value out-

Predicting the Predictor -A Stock Market Appraisal

Continued from page 3

creased productivity should be used to lower prices so that consumers would receive more goods and services for the same dollar. He believes that lower prices would better "distribute the benefits of increased productivity between workers, investors and consumers without sacrificing our "international competitive position.'

So there you have two contraprices, the other favoring lower

Although the so-called cost-of-Among wholesale commodities the wholesale price index stands vir-Crude material prices are off 2% in the past year, and 20% from the Korean War peak in 1951. The duPont Corp. recently stated that the average selling prices of their products fell by 3% during 1960. And at the retail level, Sears Roebuck has announced that the prices of goods in its 1961 catalog are 2.4% below last year's on average. Not any inflation there.

To get back to the stock market, what have stocks already done about inflation? Well, since the War, the stock market has out-distanced inflation by over 5-to-1. (Stocks up 333%; cost-ofliving up 66%.)

stock prices have risen over 40%; yet the cost-of-living has risen

Apparently the market has trends far into the future; yet ings. slowing down or checked.

(a) Goods are in supply and there is excess plant capacity in most major industries

(b) Foreign competition is beginning to be felt.

out of the 350% actual rise in (c) The Federal Reserve Board prices - 323 percentage points is dedicated to a program of a were due to the increase in the 'sound" dollar.

(d) Industry has developed resistance to excessive wage increases which have been the prime mover in the inflation.

Yet, many investors say they dictory views, one favoring higher are buying stocks to hold as inflation hedges. This claim doesn't jibe with the types of stocks essential. which have been in greatest deliving index has risen 7% since mand in relation to supply. For 1957, much of that rise reflects example, Utilities have been advances in the cost of services. strong for a long period, yet they certainly are not benefitted by facts are different. The over-all inflation. Also, the real inflation stocks representing ownership of tually unchanged from early 1957. natural resources have been lagging way behind the general market, particularly oils and coppers.

It is my belief that inflation is bullish on common stocks under only one condition. That condition is that the inflation must result in higher earnings and dividends to be really bullish. We have long passed that point. The inflation we have been having, mainly in wages, has raised production costs faster than producers can pass them on to consumers in higher prices. The result has been to curtail profit margins and earnings.

Earnings

Last year's earnings on indus-In the past five years, industrial trial stocks (Std. & Poor's 425) were only \$3.12 per share, the lowest since 1954, excepting only 1958 when they were \$2.95.

At current levels industrials already discounted inflationary are priced at about 21 times earn-That is higher than they there are some grounds for be- were in relation to earnings at lieving that inflation has been the top in 1929. At the bull market high in 1946 they were 20 times

Over-Counter Market-National earnings and in 1937 17 times. Since 1949, industrial stocks Shopping Center for Securities have risen 13 times as much as earnings. That is a startling state-

tional affairs. In sum, the stock market is probably in an area of over-valuation where an unusual amount of caution is essential in selecting commitments. Buyers and holders should be aware of the extraordinary risks in this

ment but it is true. Prices rose

about 350% while earnings gained only 27%. Without a boost in in-

vestor-confidence (measured by

the price-earnings ratio), indus-

trial stocks could have risen only

27%, the same as earnings. Hence

price-earnings multiple. Investors

have registered great hopes for

higher earnings in the future. It

would require a substantial in-

crease in corporate profits to sup-

port current prices. Will such

improvement come soon enough?

Only time will tell, but speed is

Capital Gains Tax

ket has been able to move up

rather easily in recent years is

traceable to the capital gains tax.

As investors grow older, they hesitate to sell at any price be-

cause of the tax, which can be

avoided by passing stocks on to

their heirs at time of death. For

that reason a large volume of

stock will not be for sale until

after it passes into the present

owners' estates. At least, that is

the feeling of many investors so

long as prices rise. That attitude,

of course, may change in event of

moons were over.

The stock market itself is

to tax.

One reason why the stock mar-

market at its present level. So much for the general market.

Favored Stock Groups

Now, as always, there are groups of stocks that are more attractive than others. Take for example, banks.

Banks

Viewed strictly as investments, stocks of leading banks appear distinctly attractive. Last year, despite the recession, net operating earnings of typical New York City banks rose 14% over those of 1959, while the gain was 12% for banks in other large cities. Currently priced about 13 Continued on page 49

of capital gain over the years. have been increased by several

Building Shares

The building industry is bound ment. to receive continuing attention as an avenue of aid to the economy Home building sagged last year, but some improvement may be far ahead. expected in 1961, reflecting easier money rates, large supply of step-up in slum clearance. Major projects will be promoted by the use of "matching" funds by the Federal government, especially in highway construction.

Labor-Saving Equipment

This includes office equipment as well as a wide variety of industrial machinery, particularly of the automatic type. High wage costs should continue to spur the demand for labor-saving devices. These industries would also be helped by any possible governmental aid through more liberal depreciation allowances.

Electric Utilities

These stocks have been in strong demand for a long time, because they provide an almost unique combination of growth plus defensive characteristics. While the long-term trend of stock prices in this group remains upward, many of them may have outdistanced near-by realities; hence, perhaps they should be bought only on sizable corrective setbacks.

Insurance Stocks (Fire and Casualty)

Insurance stocks have more than recovered from the effects of last September's hurricane, and have moved upward in anticipation of generally improved earnings in 1961. The merger movement made good progress in 1960, with weaker situations being acquired by stronger companies, and smaller companies acquired by larger companies. Besides the economies of consolidation, spreading of risks both as to diversity and geographically is a favorable result of mergers. Many of the larger lire-casualty panies have raised their cash dividends in the past two years, and additional instances are likely.

Others

Besides such defensive types as banks, insurance and electric utilities, the following groups appear to merit investment attention: foods, drugs, tobaccos and telephone. American Telephone & Telegraph has turned in a very gratifying performance by more than doubling in price since its 1957 low. Part of the new interest in this stock is due to its belated acceptance as an electronic glamor issue. Publicity concerning the scientific achievements of Bell Telephone Laboratories no doubt played its part here. So did the stock split and increased dividend,

Probably, many of the oil stocks should be included as attractive; however, considerable care in selection is needed because of over-capacity in all areas of the petroleum industry, and the disturbing international situation.

In the "science" group there are many issues which from time

to time may work out spectacor 14 times earnings and yielding ularly. Technology pushes for-3½%, bank shares hold promise ward into new frontiers at an accelerating pace. There is an unwritten rule in Wall Street to the effect that inmortgage funds and probably a vestors should ride with the trend and not fight it.

In closing, I would amend that rule by calling attention to the fact that the stock market is always wrong just before a major reversal. That self-evident truth fever of big speculative move-

been an early mover. It is now forecasting "big things ahead" for previous fiscal year. The Shapiro 1961. It is hoped that future developments in the business world will be up to the market's bright expectations, if not better.

*An address by Mr. Comer before the 11th Annual Financial Forum of the Farmers & Merchants Bank, Long Beach, Calif., March 23, 1961.

Presidential

Burnham & Co. headed an underwriting group making an initial public offering on April 12 of 150,000 shs. of Presidential Realty Corp.'s common stock at \$6.75.

Net proceeds of the sale totaling approximately \$830,000 will provide the company with equity money for building projects, two of which are presently under construction. Total cost of the planned developments, which include land, buildings and other costs, is estimated at \$8,900,000.

Presidential Realty Corp. was organized in January, 1961, to acquire the outstanding stock of man's increasing knowledge and M. Shapiro & Son, Inc., which develops, owns and operates residential and commercial rental properties, and is also engaged in real estate "syndication" and property management for others. Wholly-owned properties of the company include seven apart-ments, all financed with FHAinsured mortgages, located in Connecticut, Pennsylvania, New Jersey and Kentucky. Partly owned properties are located in New York, Connecticut, Missouri and Ohio.

Total revenues for the year year ended Oct. 31, 1960 were \$2,618,720 and net income, conis often lost in the shuffle-in the sisting primarily of capital gains was \$535,761, compared with total revenues of \$2,907,273 and net in-As usual, the stock market has come, also consisting primarily of een an early mover. It is now capital gain, of \$431,897 for the Co. has paid regular cash dividends on its common stock since November, 1956. Since November, 1957 cash dividends have been paid at an annual rate of 50 cents per share and since November, 1959, a yearly stock dividend of 2% has also been paid.

The continuity of any market thus created is largely dependent upon his financial rethus risk his own money.

The Over-the-Counter Market

On the Over-the-Counter cate with each other instanta-In those cases where less neously through private teleactive securities are traded on graph wires or other facilities

Thus many over-the-counparticular stock to create a ter dealer-brokers, in New market, in the absence of suf- York, for instance, will be ficient public orders to buy doing business throughout or sell, by, in effect though the day with other dealernot in strict parlance, putting brokers in Boston, New Orin an order for his own ac- leans, Chicago, St. Louis, wanted to sell 100 shares of Francisco, Seattle and other ties they are "quoting" and maintain inventories in them. sources and his willingness to to act solely as brokers and not dealers.

Because of competition, the spread between the bid and the asked figures on more active stocks is quite narrow. In less active stocks the overthe-counter dealer must find contra-orders if he does not wish to assume inventory positions in the securities involved. It is his business to know which other dealers in all parts of the country might have a buying interest in a given security.

One, five, ten, fifty or more over-the-counter dealers in different parts of the country may interest themselves in "making a market" for a given unlisted security. Prospects known to the first dealer, or known to those other dealers he contacts (either locally or in other cities), may often include individuals who are believed to have a buying or selling interest in the instant security, or investors who might be induced to buy.

The process of constantly seeking out buyers and sellers is characteristic of the Over-

A major characteristic, too, of the "counter" market is negotiation. If a gap in price exists after a prospect is Some firms, of course, choose found, the transaction does not die. Instead, negotiation ensues. The mere existence of a buy or sell order is the incentive for the "counter" dealer to find the opposite. The Over-the-Counter Market thus has no physical limitations.

> As a practical matter, though, individuals in any city of 100,000 or more can frequently pick up a phone and call a dealer-broker and get an execution on an order Continued on page 51

Don't Take the Present Era Too Lightly

I heard and saw a program on reviewed some of the high-lights Will Rogers. There were pictures on the crazy doings in the 20'sprohibition, gang wars, stock market foibles, unpreparedness for war, depression, and all the great waves of mob madness that this nation is able to produce in a way that is unique in itself. Today our brokerage offices are crowded with people who want a "free ride" and a "fast buck," and

Sunday at that, I received a call at my home at 9 p.m., from a client who had heard about a "hot" new issue. He is a multimillionare. He is a good account commission-wise. I have a slim chance of getting about 50 shares for all my customers. I told him this. He said "I'll take it." I replied: "If I get 50 shares how far do you think that will go among about 50 customers who want some?" The stock has never been no one has seen a balance sheet or an income account, no one whether or not there will be a dividend. You add that up.

What Do We Do About It?

I said at the beginning of this piece, "Babe Ruth also struck out more times than any other player." But he kept on trying and highly speculative science and glamour stocks of small insignificant companies that depend upon a vast armament boom for their sustenance. A New Name

The management of this 63-year dividends paid. old company has decided that the title - American Ice - no longer reflects the variegated aspects of the firm's operations. For this reason, stockholders will be asked to vote on changing the name to American Consumer Industries, Inc. at the April 25 annual meeting. The former name will, of course, be retained for use in connection with ice manufacturing and distribution.

The Years to Come

Within the next few years, American Consumer Industries, Inc., according to management estimates, should achieve over \$100 million in total sales and between market has not yet realized the The company's resistors are consolidated.

that sales must expand for the existing subsidiaries and, in addition, new growth companies must

valuable downtown and suburban real estate which is now worth many times more than original purchase cost. Thus, new companies can be acquired with the cash generated through the sale of property-and, most important to nvestors, without dilution of common stock interests. Management is intent on guarding this compact equity base of only 325,-752 shares in the years ahead. As earnings rise, this equity leverage will greatly benefit the common stockholder.

Diversification Moves

The large sales volume of the poultry company results, as is general in the food industry, in small profit margins. American Ice intends to move into more profitable fields. Negotiations are now going on for acquisitions in such areas as building machinery, wire and other steel products and various consumer products.

In addition to moves toward diversification, American Ice intends to fully exploit all its existing warehouse facilities. Thus, the Kansas City depot is now 100% utilized because of management's aggressiveness in obtaining business from the fruit and vegetable shippers in California. Full utilization is also the goal for every other storage warehouse. The company believes that ice-cooled railroad cargo cars can be a growing source of business over the coming years.

It is this willingness to change, to diversify, along with proven ability to expand traditional lines, that makes American Ice 'sleeper" growth situation.

Estimates for 1961

For 1961, consolidated net sales are estimated at over \$50 million with net income substantially higher than the \$1.76 per share earned in 1960—with an estimate of over \$2 per share. This summer is expected to be much more normal than the 'cool months of '60 ice sales should benefit in consequence. Strikes against California fruit farmers cut down last year's National Ice volume but are not expected to be a factor in

Bank Term Loans and The Interest Rate Outlook

Continued from page 5

of foreign time deposits that left our banks in 1959 and early 1960 when a rate higher than our ceiling could be obtained from openmarket instruments. But lifting the ceiling for deposits of foreign governments, monetary agencies, and central banks is not enough. We must be able to tap the huge reservoir of short-term corporate funds outside the banking system (most of which were once demand deposits) if we are to meet the future credit needs of our

There are some inside and outside our fraternity who say perhaps we shouldn't make so many term loans, that we should match our demand deposits only to short-term self liquidating loans -in other words stop borrowing short and lending long. There is something to be said for this, but completely behind us. There is I should like to make a few ob- much debate about the speed and servations:

(1) A regularly amortized term loan may be more liquid than a continuously renewed demand

(2) The commercial banks today represent almost the only source of intermediate-term lend-

(3) The average quality of credit represented by term loans is superior to almost any other category of loans in the banks.

(4) The maturities each month of the year and the occasional prepayments provide a revolving this recovery may be less dyfund of substantial magnitude.

(5) For most of the last two decades, the commercial banks of the country would have been loan-hungry if they had not been willing to extend credit beyond the traditional 90-day maturity.

Our crystal ball doesn't tell us what proportion of the projected increase will be in term loans; but in recent years, I am sure, the proportion has been increasing. If this trend continues, it will be well if a greater portion of our term loans can be covered by a body of time deposits that in a sense we can increase or decrease at will - by appropriate adjustment of rates. As you know, some European banks have sold intermediate-term debentures with maturities up to seven or eight years to cover their intermediateterm loans. There is no reason why this could not be done here except that (a) the rate would probably be too high, (b) as I have said before, there is almost no market for intermediate-term obligations other than the very commercial banks that would be issuing the debentures, and (c) most bankers dislike showing borrowings in their statements.

So, full circle, I come back to the future demands for loans from our customers, we shall have to buy some of our raw material in the form of time deposits. For most bankers, to the extent that they have savings deposits, this is an old story. They may have made few term loans but they have made many mortgage loans and consumer credit loans which have deferred maturities and are in the nature of, if not in the form of, term loans. Our decision to buy the deposits of corporations derives from a similar motive.

The Business Outlook

And now, I should like to say something about the business outlook. At this point, I am reminded of what I think was one of the best cartoons of the last war. It may have-certainly could havebeen one of Low's. It showed a little woman—sort of a British equivalent of the late Helen

of the cable could be seen below the English fog that obscured the rest of it. The caption had the lady saying, "How do you know that you have a balloon up there?" and the Tommy replying, "Lady, if I haven't, I have sure done the Hindu rope trick." With the fog that always obscures the facts upon which we try to make our judgments, we have the right be as sceptical as the little

Most economists looking into this murky atmosphere appear to believe that we are approximately at the low point of the current business recession. While the evidence is not conclusive and never is at turning points of business termination of the declining phase of the recession, however, may not mean that the recession is it comes. In the preceding recession the low point of the Federal Reserve Board index in April of 1958 was followed by a "V"-type recovery very symmetrical with the decline, so that seven months later the index had practically reprevious seven months of decline. In each of the recessions of 1948-49 and 1953-54, however, the index stayed at its approximate low for about six months.

It is, of course, possible that namic than in 1958, if for no other reason than that the decline has been more moderate. Another possible reason is that the stimulus of a rapid increase in housing starts which aided the recoveries in 1949, 1954 and 1958 seems now to be lacking; another is that, in spite of recent encouraging indications, there is still some doubt that the outlook for automobiles and consumer goods generally for the balance of this year is wholly favorable. This view is based partly on a feeling that a rapid increase in consumer credit may not get under way for some months, and was buttressed by a recent report of the University of Michigan on consumer buying intentions. It found them somewhat less than buoyant. A third factor is the uncertainty of an early upturn in business spending for plant and equipment. These highly important sectors of the economy may very well have reached the end of their decline, but some months could elapse before they contribute vigorously to higher output and higher employment.

Recovery Factors

Among the factors favoring a gorous recovery is the influence the point that, in order to finance of the swing from inventory accumulation to inventory liquidation which has been greater this time than in any of the previous three post-war recessions; also the fact that defense contracts have been rising for some months and government - financed construction is moving up sharply. Moreover, the Federal Reserve was much prompter this time in changing from a policy of mone-tary restraint to one of ease; money is readily available and seems likely to remain so at least for the remainder of this year. There may also be some psychological stimulus - though not of the most wholesome kind - from the apparently widespread belief, rightly or wrongly held, that the present administration is committed to projects and policies that will inevitably lead to more inflation.

At some point of the recovery, possibly nine or twelve months hokinson's clubwo nan-watching from now, a serious question may a British Tommy minding a bar- arise as to whether "full employrage balloon. Only 10 feet or so ment" will be reached without

additional government measures. The new Council of Economic Advisers apparently is working towards a target of no more than 4% of the labor force unemployed. If the subsequent improvement in business does not reduce the unemployment percentage to something approaching this figure, there doubtless will be much discussion of what additional government-induced stimuli can be provided. An important question then will be: how much inflation will result from such measures?

Interest Rate Outlook

And now I shall attempt to peer for a moment into the murk surrounding interest rates, a subject vital to us all. Unless I am wrong about the business outlook, bank lending rates should remain firm for the foreseeable future. Whether they will rise during the rest of this year probably depends upon cycles, I share that view. The the vigor of the business recovery. In 1958 there was a sharp upturn in rates shortly after the recovery began. In the 1954 recovery, the upturn was modest until the middle of the following magnitude of the recovery when year. My guess is that we are at or near the bottom of both longand short-term rates and that both will be moderately higher by December.

Having said this, I would like to finish with another story which may apply to this and to any covered the ground lost in the other predictions that I have made:

> A famous engineer was on a hunting trip in the Rocky Mountains and early one morning spotted a bear too far away to shoot. He trailed the bear all day long and towards evening when both were tired, the bear went up a canyon with steep sides and encamped behind a huge rock. The engineer knew then that with dark coming on he would never equipment, air conditioning, and get a direct shot at him but pipelines. Canmakers will need get a direct shot at him but thought that he might be able to carom a shot off the wall. In common with all engineers, he carried a slide rule and a protractor, from which he proceeded to calculate the angles of incidence and coincidence, the wind drift, and probably even the air pressure at that altitude and the temperature at that time of the evening. In any event, thus prepared, he raised his gun and fired. His friend, to whom he was later relating this story, said, "Did you get him?" The engineer replied, "I did not! I missed the wall."

*An address by Mr. Sharp before the Louisiana Bankera Association's conven-tion, Biloxi, Miss., April 10, 1961.

Brooks Instr. Common Is Sold

Andresen & Co. offered and sold on April 11 150,000 shares of Brooks Instrument Co., Inc. com-mon stock of which 138,000 shares were offered to the public at \$5.50 per share and 12,000 shares were offered to employees of the company at \$5 per share. The company is a leading manufacturer of variable area flow meters, generally called "rotameters." The company's products are used in industrial and laboratory work in various fields, including chemicals, petroleum, atomic energy, missiles and processing industries.

The company intends to apply the proceeds from this sale to the financing of expansion of European operations, to carry increased inventories and other working capital purposes.

The company was incorporated in 1946 as Brooks Rotameter Co. and assumed its present name in

STATE OF TRADE AND INDUSTRY

Continued from page 9

steel demand. However, seasonal influences should be in effect through the second quarter.

One development is a general lengthening of lead time. And, while there is no real attempt to rebuild inventories generally, buyers are taking out at least token insurance against shutdowns from lack of steel.

But competition for markets continues to intensify. Some price cuts in cold-rolled strip were observed in the Midwest last week, and prices of some grades of stainless were also cut. In each case, those announcing the price breaks contended they were instituted to "meet the competition."

This indicates the price front, particularly on specialty products is on the shaky side. However, no broad movement on prices is expected at this time.

Rise in Steelmaking Rate Continues; Scrap Reflects Bullishness

Look for steel production this quarter to exceed the first quarter's output by 10 to 12%, Steel magazine said.

It estimates this quarter's outout at about 22 million ingot tons. First quarter production of 19.7 million tons was up 4% from the previous quarter's output.

Weekly ingot production has risen steadily for four straight weeks, and the upturn is expected to continue. Output this week will slightly exceed the 1,648,000 tons that Steel estimates the industry poured in the week ended April 8.

The upturn is mostly seasonal. Better weather is spurring demand for products used in construction, road building, farm larger quantities of tin plate as they step up production of containers for spring and summer food packs.

Bullishness attending the rising steel rate is being reflected in the scrap market. Steel's price composite on No. 1 heavy melting grade rose \$1 to \$39.67 a gross ton last week after leveling for a week. Previously, it gained six weeks in a row.

While steelmakers are cautious in predicting improvement, the metalworking magazine said, they admit the possibility of underestimating the recovery potential.

Steel said automakers can be counted on to give the steel industry more support than they provided in the first quarter. Encouraged by rising sales and

diminishing dealer inventories, they are planning on building about 435,000 cars in April, 7% more than were made in March. Second quarter schedules are tentatively set for 1.4 million cars, 18% more than were built in the first three months.

It will be several weeks before increased auto output is translated into new orders for steel, but some mills report that they are already receiving requests for April shipment of orders that were ticketed originally in May.

Last year, the auto indutry continued to be the steel industry's biggest customer, the magazine reported. It took one-fifth of mill shipments of finished products.

Service centers still are the second best customer. The next five leading market groups (in descending order): Construction, containers, machinery (except electrical), contractors' products, and converters.

Steel said ore shipping on the Great Lakes will get a slow start this year because of near record Capitalization at Jan. 15, 1961 stocks of ore on lower lake doc'ss

> The bulk of the fleet isn't likely to get up steam until early May,

Off-the-record opinion of shippers points to a season tonnage not much larger than the 58.2 million tons shipped in 1958. Tonnage last year was 69.6 million.

Oremen expect pelleted taconite and jasper concentrates to make up a larger proportion of Lake Superior ore shipments this year. Last year, pellet movement was about 11.2 million tons, about 16% of total lake ore shipments.

Steel Production Data for the Week Ended April 8

As previously announced (see page 26 of our issue Dec. 22) the American Iron and Steel Institute has materially changed its weekly report on the steel industry operations. The revised formula no longer relates preduction totals as a percentage of the industry's operating rate based on the Jan. 1, 1960, over-all productive capacity. Instead, and effective Jan. 1, 1961, the output figures are given as an index of production based on average weekly production for

The revised method of reportig presents the following data:

Production for week ending April 8, 1961, was 1,696,000 tons 91.0%), previous week's output of 1,632,000 (*87.6%).

Production this year through April 8, amounted to 21,654,000 tons (*83.0%), or 41.6% below the 37,067,000 tons (*142,1%) in the period through April 9, 1960.

The Institute concludes with Index of Ingot Production by District, for week ended April 8, 1961, as follows:

*Index of Ingot Production for Week Ending

North East Coast	100
Buffalo	80
Pittsburgh	82
Youngstown	65
Cleveland	90
Detroit	104
Chicago	96
Cincinnati	89
St. Louis	110
Southern	100
Western	107

*Index of production based on average weekly production for 1957-59.

April Auto Production Expected to Start a Rise in Car Output

Despite a scattering of shutdowns causing an 8.5% decline in S. passenger car output this week, April auto production, tentatively slated for a 7% rise this month, will begin next week to experience the upturn from the first three months of the year, Ward's Automotive Reports said.

The nation's auto plants assembled 92,994 passenger car during the week ending April 7, a substantial improvement over the average week since the beginning of the year, but under the 101,571 of the previous week, and still at sharp contrast with 133,460 cars turned out in the same week last year.

Truck production, Ward's said, was up 11% for the week to 23.626, after 21,288 units for the previous week, and was equal to 85% of 27,748 trucks built in the same week of 1960.

The statistical agency said that the third week-long halt by Buick, Oldsmobile and Pontiac divisions of General Motors, paring GM output by 29% caused the week's decline in passenger car making, although other car makers closed five more plants.

Ward's said Chevrolet division closed its Tarrytown, N. Y. site for the week in an inventory adjustment; Ford Motor Co. suspended both car and truck manufacture at Norfolk and Los Angeles, and car making at Louisville. Chrysler Corp. closed its

Business Failures Down for Third Consecutive Week

Commercial and industrial failures, declining slightly for the third consecutive week, dipped to 343 in the week ended April 6 from 350 in the preceding week, reported Dun & Bradstreet, Inc. However, casualties remained slightly above the toll of 333 in the similar week a year ago and the 337 in 1959. As well, business mortality continued 16% above the pre-war level of 295 in the comparable week of 1939.

Liabilities of \$5,000 or more were incurred by 300 of the week's failures as against 314 in the previous week and 292 last year. In contrast, small casualties above the corresponding period in with losses under \$5,000 edgcd up to 43 from 36 a week ago. A total of 44 failing businesses suffered liabilities in excess of \$100,000. rising from 41 in the preceding

The toll among construction contractors fell to 47 from 58, among commercial services to 30 from 35, and among wholesalers to 26 from 39. On the other hand, manufacturing casualties ran contrary to this trend, climbing to 71 from 56, and retailing rose slightly to 169 from 162. These two lines had heavier mortality than a year ago but construction. service and wholesale failures fell below 1960 levels.

Geographically, the week's dec'ine was concentrated in four regions: the Pacific States, down to 71 from 80; the West South Central, down to 18 from 23: New England, down to 11 from 18; and the West North Central, off to 12 from 14. Contrasting increases prevailed in four regions, with the most noticeable rise in the South Wholesale Commodity Price Index Atlantic, up to 42 from 31. Little change appeared in the Middle tlantic States with 112 as 111 or in the East North Central with 54 as against 55. Year-toyear trends were mixed, with four regions having fewer casualties, four having heavier casualties and one region's toll holding even.

Canadian failures rose to 56 from 23 in the preceding week and 39 in comparable week of last year.

Electric Ou'put 2.4% Higher Than in 1960 Week

The amount of electric energy distributed by the electric light and power industry for the week ended Saturday, April 8, was estimated at 14,182,000,000 kwh., according to the Ecison Electric Institute. Output was 19,000,000 kwh. above that of the previous period, and it moderately exceeded week's total of 14,163,000,00 kwh. and 330,000,000 kwh., or 2.4% above that of the comparable 1960 \$6.00 of the preceding week, which

New Officers of the NYSE

J. Truman Bidwell, Vice-Chairman of the Board of Governors of the New York Stock Exchange, has been nominated to serve a one-year term as Chairman. Mr. Bidwell was elected to the Board of Governors in 1958 and named Vice-Chairman in 1959.

Andrew M. Baird

Howard E. Buhse

John J. Sullivan

J. Truman Bidwell

James Campbell, Jr.

Benjamin Einhorn

The Nominating Committee, headed by Robert L. Cahill of Cahill, Smith & Gallatin, nominated six new Governors for threeyear terms:

Andrew M. Baird, Vice-President and Director of A. G. Becker & Co., Incorporated, Chicago. Mr. Baird has served both as a Governor and Vice-President of the Investment Bankers Association and is presently a member of the Board of Governors of the National Association of Securities Dealers.

Howard E. Buhse, a partner in Hornblower & Weeks, New York City. Mr. Buhse served as Chairman of the Board of Governors of the National Association of Securities Dealers in 1951 and as Governor of the Bond Club of Chicago in 1958.

James Campbell, Jr., a partner in the specialist firm of Marks & Campbell, New York City. Mr. Campbell began his career as a page on the New York Stock Exchange. He became a member of the Exchange in 1944, was appointed a Floor Official in 1959 and was a member of the 1960 Nominating Committee.

Benjamin Einhorn, a partner in the specialists firm of Astor & Ross, New York City. Mr. Einhorn also entered the securit es industry as an Exchange page. He has been a member of t e Exchange since 1929 and served on the Exchange's 1957 Nominating Committee. Mr. Einhorn is a member of the Advisory Committee of the New Jersey Bureau of Securities and is Co-Chairman of the Wall Street Division of the Federation of Jewish Philanthropies.

Walter S. Robertson, a partner in Scott & Stringfellow, Richmond, Va. Mr. Robertson has held important Government assignments under three Presidents. In March 1953, Mr. Robertson was appointed by President Eisenhower as Assistant Secretary of State for Far Eastern Affairs and held this position until July 1, 1959.

John J. Sullivan, President of Bosworth, Sullivan & Company, Incorporated, Denver, Colo. Mr. Sullivan, a member of the Exchange since 1949, is past President of the Association of Stock Exchange firms; past Chairman of the National Association of Securities Dealers and former Governor of the Investment Bankers Association. He is a Knight Commander of St. Gregory the Great and a Knight of Malta.

Three Governors were re-nominated to serve three-year terms: John A. Coleman of Adler, Coleman & Co.; Henry M. Watts, of Mitchell Schreiber, Watts & Co.; and, James F. Burns, Jr. of Harris, Upham & Co.

Total membership of the Board is 33 including three Governors appointed as representatives of the public. Elections will be held on May 8

Re-nominated to be Trustees of the Gratuity Fund, from which payments are made to the families of deceased members of the Exchange were: Charles B. Harding of Smith, Barney & Co. and William D. Scholle, an individual member.

The 1961 Nominating Committee aslo proposed the following to serve on the 1962 Committee:

Joseph L. Gitterman, Jr. of Arden & Gitterman; Stanley Hesse of H. Hentz & Co.; Carl N. Miller, Jr. of Bache & Co.; James F. Nick, Jr. of J. F. Nick & Co.; Lorraine F. Pitman of Leidley & Co.; Lorraine F. Pitman of Porton & Co.; Lohn W. Laidlaw & Co.; Albert B. Tompane of Benton & Co.; John W. Callaghan of Goldman, Sachs & Co.; Allen J. Nix of Riter & Co.; and, Avery Rockefeller, Jr. of Dominick & Dominick.

In addition to Mr. Cahill, the 1960 Nominating Committee included:

William V. Couchman of Winslow, Cohu & Stetson Inc.; Jo'n W. Dayton, Jr. of Clark, Dodge & Co.; Richard deLa Chapelle of Lee Higginson Corp.; George C. Dinsmore of Stokes, Hoyt & Co.; Robert Le Brecht of R. W. Pressprich & Co.; Herman N. Liberman, Jr. of Warner, Jennings, Mandel and Longstreth; Robert A. Powers of Smith, Barney & Co. and Milton S. Steiner of Steiner, Rouse & Company

Technology Will Cope With Resource Deterioration

Continued from page 19

President's Materials Policy Commission noted, in the first 50 years of this century the population of this country grew by 99%, while materials consumption increased 153%. According to work at Resources for the Future, Inc., the per capita consumption of agricultural products over the same period increased by 26%, and that of minerals grew by more than two and three-quarters times. Specifically, between 1900 and 1957 per capita consumption of iron ore grew from 0.7 ton to 2.7 tons; copper, from 4.7 pounds to 14.6 pounds; salt, from 82 pounds to 282 pounds; phosphate rock, from 7.7 pounds to 47.8 pounds; petroleum, from 22 gallons to 732 gallons; and natural gas, from 3,000 cubic feet to 62,-000 cubic feet.

These figures, showing a multifold expansion in every instance, are, however, only a partial explanation of the over-all increase in per capita materials consumption. The kind of growth just described has been paralleled by an equally significant increase in the range of materials now consumed. According to S. G. Lasky of the U.S. Department of the Interior, "Fully 30 different metals and minerals came newly into use, or moved from casual into quantity commercial production, in the 25 years between World War I and World War II. About 25 additional new items have found a place in present technology or are being investigated and developed for the technology of the future."3

This widening area of needs and intensification of pressure on resources extends beyond material resources alone. There is also increasing "per capita" use (in the sense that the increase is greater The Current Pace of Technological than that in population growth) of the recreational facilities offered by the land. Thus, visits to national parks grew by more than 450 times between 1904 and 1956. This is a crude measurement of what we are interested in, to be sure, but it does serve to indicate the intensification of recreational needs in relation to natural resources. And, of course, it is much more remotely a result of technology, reflecting the increased leisure brought about by higher productivity and the consequent reduction in working hours, the productivity gain being due ba-

resource "devourer." It is also- in the last century man has and this is the unfortunate aspect achieved 90% of his technological Atmospheric pollution is of historical time. one example. Here I do not speak of pollution knowledge in the field of techfrom sewage, for this is not the nology leads to the same type of result of technological progress growth. The more advanced the but the failure to apply it.4 The pollution that properly belongs in this discussion of the effect of technological progress on resources is industrial pollution of

3 S. G. Lasky, "Minerals, Defense and Growth," Challenge, August-September,

4 But I should acknowledge an exception. The recent widespread introduction of liquid detergents in the place of soap is a product of technological progress that is causing pollution from sewage despite treatment. It cannot be removed with current techniques, and a downstream user may find that his water has a tendency to foam as it comes out of the tap.

water. The pulp mill, the refinery, the chemical plant, the metallurgical plant and many mines and manufacturing enterprises may lower the quality of the water they use and return to a stream. Here the emphasis is more on the esthetic rather than the material resource values. An oily, saline, foaming or acid stream may be an eyesore and unsuited for recreational use—certainly for fishing, and also for sheer enjoyment as a scenic element.

The one thing all these examples have in common is that they are rather easily reversible. The means and knowledge exist for the deleterious effects on the atmospheric and water resources to be curbed and even eliminated. This is not true of my final example-the effect on the land itself of what has come to be called the "urban sprawl." What is pertinent here is not the expansion of suburban development due to population growth, but the character of that development as a reflection of our technology: again, in this instance, the autobile, and its first cousin, the bull-

Thus it is not the fact that more land is required to house a growing population, or even that perfectly good agricultural land is being covered with 80% concrete slabs and asphalt roads and 20% grass. The important thing, on the esthetic score, is that the value of the landscape itself as a resource is being destroyed, in most instances without even the smallest percentage of it being retained in parklands. Although this is not absolutely irreversible, the time scale that would be required to restore some of what is being destroyed is far greater than that for "depolluting" the stream.

Progress

I turn now to a final point in the discussion of the relation between technology and resources. Thus far I have made repeated reference to the development of technology-to the fact that technology is not static over time, but builds on itself and moves for-

This fact has, in my opinion, immense significance for us of the present, for I believe that we are at a turning point in the technological history of mankind. We are all familiar with the speed-up in the rate of technological change sically to technological progress that has occurred in the past two So much for technology as a centuries. It has been said that a "degrader" of resources as progress during the 5,000 years

Part of this can be ascribed to bent for individual automotive institutional changes that have engines emitting pollutants as behind the acceleration has been source degradation at present the are opened for the acquisition of new knowledge. Thus the growth Not far behind as a subject of of knowledge is exponential. public clamor is water pollution. Similarly, the application of technology, the greater the opportunities for further advance and the more rapid the rate of advance.

In the period since World War II this acceleration in the rate of technological advance has become almost awesome. The population explosion that is currently of such great concern in the world has been paralleled by (and indeed, caused by) a technological explosion, the implications of which are not yet fully appreciated. A chemical executive has remarked that 15 years from now he expects his

cautious indeed in attempting to look farther into the future. Anything can happen - and probably

The Resources Outlook

The foregoing constitutes a background for a look at the resource needs of this country in the future. I have tried to emphasize that technology is the key element. Unless proper allowance is made for at least these technological developments that can be foreseen, an attempt to project into the future may fall into serious error. Thus, the work at Resources for the Future has avoided wherever possible the rigid projection of trends, or mere statistical extrapolation. The essence of such procedure is the assumption that whatever forces prevail now will continue to prevail in the future. This is certainly likely for the very near term, but the longer the future period one considers, the lesser this likelihood becomes, especially in the midst of the technological explosion. I shall devote the remainder of this paper to a summary of the resource outlook in the United States that has been built up by the various studies conducted by Resources for the Future, one of which is still in the writing stage.

Energy Resources-Let me first turn to energy resources, the subject with which my own work has been concerned.5 We chose the ear 1975 as delimiting the period in the future for which it would be possible to make detailed and meaningful estimates of the energy needs of the United States. The year itself should not be taken literally, however.

We estimate that energy consumption in 1975 will be 88% greater than in 1955, compared with an increase of 119% in Gross National Product and 41% in population. Energy consumption thus grows more than twice as much as population, but falls considerably short of the increase assumed for Gross National Product. We excluded nuclear energy from the estimates because the uncertainties concerning the timing of economic atomic power are still very great. At present, one can say little more about the place of atomic power in 1975 other than that it seems clear it will not be an important component of energy at that time.

Among the fuels the largest increase is found for natural gas, from 9.6 trillion cubic feet in 1955 to 19.9 trillion in 1975, a gain of 107%. Oil and natural gas liquids (liquid hydrocarbons) are estimated to grow by 197%, from 3.0 billion to 5.9 billion barrels. Bituminous coal is third, with an esor 15%, from 431 million to 754 million tons. The greatest increase by far, however, is not for a primary fuel but for electricity, which is estimated to increase by 211%, from 633 billion 1,966 billion kilowatt-hours. Only anthracite is estimated to decline, from 20 million tons in 1950 to 14 million tons in 1975, a drop of 30%

Such differences between the growth rates in the consumption of the various energy sources have also existed in the past, but the differences noted above are far smaller than at times in the past. By the standards of recent history they are, in fact, very close. Between 1940 and 1955 bituminous coal consumption declined by 2% while petroleum use rose 129% and natural gas usage 238%.

Without getting involved in detail, it is possible to account for this difference with the reasons for the previous disparate growths. Bituminous coal has been losing its markets to oil and gas for several decades. The most

firm to be making most of its 5 Schurr and Netschert, op. cit.

decade and a half, one must be of marine transport from coal to should rise. oil fuel. Similarly, in space heatto that of oil and gas.

from that of 1955: bituminous coal and natural gas each account- as a range. ing for about one quarter of the total, oil and natural gas liquids Submits Own Corrected Estimates somewhat more than two-fifths, hydropower less than 4%, and anthracite less than 1%. The change in these proportions for the 20year period is less, incidentally, than the changes between 1950 and 1955.

Nuclear Power Would Hit Coal

Suppose, however, nuclear energy were to develop significantly by 1975, what would be the effect casting of nuclear power is essentially a matter of guessing when it will become competitive. Many different estimates have been made, but the consensus appears to be that competitive nuclear power is not likely before the end of this decade, and then only in regions with high energy costs. The most reasonable guess is that nuclear power could possibly account for as much as 10% to 15% of total electricity production. Since electricity is estimated to account for almost 25% of the consumption of primary energy sources in 1975, atomic fuels would, on this basis, replace from 21/2% to 33/4% of the total of conventional energy sources used in that year. Coal would, however, absorb the major impact, since in our estimates it will account for almost two-thirds of the energy consumed in electricity production in 1975. If nuclear power were entirely at coal's expense (setting the limit on the possible effect), between 75 and 110 million tons of coal use would be replaced in 1975.

This would be a serious impact on the coal industry. It is not enough to upset the growth in coal use projected through 1975 which is in such contrast to coal's history in the preceding decades, what effect atomic energy may eventually have on coal consumption. If the current campaign to is successful, this is one of the have to consider.

Reason for Underestimates

What about the domestic supply of energy sources to meet increase in costs measured in con- most useful. stant dollars.

not a prediction of what will hapsions by industry and policy de- might be expected, the findings cisions by government were made between now and 1975. A national fuels policy, if it is adopted, would be a most important determinate here. Considering only the re-

profits from products that have dramatic loss was the conversion source position and the technology not yet been discovered. When of railroad locomotives from that can be applied to those resuch changes can be expected in steam to diesel power, which had sources, however, we see no reathe comparatively short time of a been preceded by the conversion son why constant-dollar costs

In a separate study covering all ing both oil and gas made serious resources which is still in proginroads into coal usage. Now, ress, Resources for the Future is however, the bulk of these con- attempting to appraise the outlook versions has been accomplished; to the end of the present century. at the same time, coal is left with Here ample acknowledgment is its most important usage—electric- made of the pitfalls inherent in ity generation. The high rate of projections for 40 years into the electricity growth thus serves to future. Small differences in the buoy up coal demand and leave it economic parameters can lead to with a growth rate much closer wide differences in results over such a period. For this reason, Because of this, the pattern of and to allow also for the great energy consumption by source in possibilities, as yet unknown, in 1975 should be little different technological progress during the period, the estimates are given

Tentative results yielded by this study are as follows:6

The demand for coal in 2000 is seen to range from 383 million to 1,921 million tons. The low figure reflects possible improvements in the efficiency of coal use, and the use of atomic energy. The high figure is two and onehalf times greater than the estimate for 1975 given above.

Oil use in 2000 is estimated to on the above pattern? The fore- range from 6.92 billion to 17.90 billion barrels, either no increase or a three-fold increase over 1975.

Natural gas demand in 2000 ranges from 21.6 trillion to 59.7 trillion cubic feet, representing a 9% to three-fold increase over

What do such consumption levels mean in terms of domestic capability? Known coal resources are quantitatively sufficient to take care of even demands of 2 billion tons a year at the end of the century. Whether it could be done at no cost increase is doubtful, however, unless radical new techniques were developed. Oil and gas resources are another matter-even our own optimistic view of these resources in the 1975 study could not support the high range of demands given above. On the other hand, there exist alternative sources, such as oil shale and other hydrocarbonbearing rocks, that could constitute an important source of liquid and gaseous fuels in this country at the end of the century. Such shift to another source would likely entail little, if any, cost increase over the long term.

All of this is without regard to foreign sources of supply. It appears that the world is only beginning to find the true extent but it is an ominous indication of and magnitude of its hydrocarbon resources. If one assumes that these resources will be freely available to all consuming counestablish a national fuels policy tries, there should be ample supplies for all through the end of possibilities the policymakers will the century, even allowing for substantial growth in consumption in the rest of the world.

Technological Breakthrough

Beyond all this, moreover, is the these projected needs? In our ferment currently going on in the work on this subject we found technology of energy use. Sudthat the failure to take account denly, phenomena and techniques of future technological progress hitherto known only as laboratory had led other estimaters to con- curiosities, some for decades, are sistently underestimate both the now being intensively investigated total quantity of the energy re- as new means of economic energy sources of this country and the utilization. The fuel cell, thermoyearly productive capacity they electricity and magnetohydrodycould sustain. Contrary to the namics are three promising ave-widely held opinion that the pro- nues to more efficient use of fuels ductive capacity for oil and gas and electric power. The pattern will diminish before 1975, and that of energy use several decades from the costs of all energy sources will now will be in large part deterrise, we believe that the energy mined by the progress made in needs described above could be these new fields and the applicamet from domestic sources at no tions in which they turn out to be

The problem appears to be one of making more efficient use of the available supply and through control of stream flow so that this becomes possible. Pollution abatement is obviously a key aspect here. Conservation in the sense of avoiding economically avoidable waste has an important place, also. Adequate water supply in the future, when, where, and of the quality needed is less a matter of adequate resources than of appropriate management of those resources.

The necessary technology already exists, but there are in addition developments in sight that offer the possibility of greatly augmenting the supply of fresh water afforded by the environment. These developments are not unfamiliar. The Department of the Interior is now engaged in a large-scale pilot plant program to test the various methods of water demineralization. Several techniques are feasible; the need is to reduce costs to the point where one or more of the processes can produce fresh water competitively with conventional sources. Although success may not be achieved soon, there is a good chance that before the end of the century underground reservoirs of brackish and saline water as well as the ocean itself will be supplying fresh water on a large scale.

A second development is the recently indicated possibility of 'rainmaking" or weather control. ter of controversy whether rain can be induced that would not have occurred anyway; nor is there yet an adequate explanation of what actually happens in "rainmaking." The prospects, therefore, are as yet wholly unforeseeable. The potential offered consists in the possibility of complete control over the weather, inducing rain where and when it is wanted, preventing it when and where the rainfall is already adequate, and thus evening out regional differences in water supply. (The attainment of this technological triumph would, however, raise more problems than it solved; the legal implications of current "rainmaking" activities are already demonstrating the limitations of current NASHVILLE, Tenn. — The Se-

Charity Drive Officials

Orie R. Kelly of G. H. Walker and Company has accepted the general chairmanship of the Financial Division of the Cardinal's Committee of the Laity for the 1961 fund appeal of New York Catholic Charities. General vice-chairmen are William A. Cole-

Orie R. Kelly

Edward F. Hayes

man of Adler, Coleman and Company and Edward F. Hayes of Glore, Forgan and Company.

The appointments were announced by John A. Coleman, executive chairman of the committee which is composed of 1,000 Catholic laymen who solicit special gifts from individuals in business and the professions. The overall committee is divided into some 50 groups, each with its own chairman and vice-chairman. and members are assigned to the division covering their particular field of activity.

Francis Cardinal Spellman, Archbishop of New York, has set a goal of \$3,325,740 for this year's appeal and of this amount the Cardinal's Committee has accepted as its quota, \$1,300,000. The remainder is to be raised by a house-to-house canvass in the 401 parishes of the New York Archdiocese.

Subcommittee chairmen and vice chairmen of the Financial

American Stock Exchange: Chairman, Edward A. O'Brien; vice-chairmen, James R. Dyer and William N. Moxley.

Investment Bankers: Chairman, Peter J. Murphy of F. S. Smithers and Company; vice-chairman, Francis Kernan of White, Weld and Company and William J. Stoutenburgh of C. J. Devine and Company

Member Firms: Chairman, Joseph C. Nugent of Mabon and Company; vice-chairmen, Joseph Gimma of Hornblower and Weeks; John B. Maher of Carlisle and Jacquelin and Walter T. O'Hara of Thomson and McKinnon.

In accepting the chairmanship of the division, Mr. Kelly noted that Catholic Charities, in addition to providing many direct services to the poor and needy, acts as a planning, coordinating and emergency-financing agency for the programs and activities of 192 separate health and welfare organizations whose services cover the entire field of social welfare. Last year these services were extended to close to 600,000 men, women and children.

Business-The operation of self-service discount department stores, principally in the east and south. Proceeds-For expansion. Office-Natick, Mass. Underwriter-To be named.

> Dividend Notices Appear On Page 16.

WASHINGTON AND YOU

BEHIND-THE-SCENES INTERPRETATIONS FROM THE NATION'S CAPITAL

WASHINGTON, D. C .- A young business man-attorney about 35 years old, living in a large Southern city, telephoned a friend in the nation's Capitol the other day.

"I would like to request a favor," he said. "My firm has about \$2,000,000 invested in Mexico. We are very much worried at the wave of anti-Americanism that is cropping up in Mexico by the Communists who are trying to spread the Castro revolution in that country.

"I'm flying in tonight, and I would like to have a conference at the State Department and with other Washington authorities. We are worried, because that \$2,000,000 investment is nearly all the capital investments we have."

The appeal of this young United States businessman for a conference and his apprehension, is a symbol of what is taking place all over the country today. People with investments in Latin America are worried and with reason.

The time has arrived when every North American should become more Latin America minded. Not only is our economic progress from here on linked directly with Latin America, but so is our national security.

Children the Target

The Cuban revolution has opened millions of eyes in this country. At this very moment the Communists in Russia and Cuba - are trying to get a tremendous anti-United States propaganda wave started in Mexico. They are making some headway.

Indicative of this is the fact that recently all eighth grade pupils in Mexico City's schools were assigned to write a theme on "The New Cuba." Authorita-tive information in Washington reported that an official of the Department of Education in Mexico City signed the order. Teachers informed pupils that they could go to the Cuban Embassy in Mexico City and get their research material.

Arriving at the embassy the pupils found the material all ready to be distributed. It included many of Fidel Castro's strongest speeches of denunciation of the United States.

Many people in this country have maintained and continue to maintain that we do not need Latin America, but Latin America needs us. The truth is we need the friendship of Latin America, and vice versa. Our geographical position points up these facts. For instance Cuba is only 90 miles away from Florida.

Two-Way Street

President Kennedy and his Administration, as did the Eisenhower Administration, realize that our cooperation with Latin America is now one of our foremost foreign policy projects. The President has not indicated as yet when he will make a Good Neighbor visit to Latin America, but it would seem certain that he will pay such a visit in due time.

Of course, economic cooperation with Latin America is not a one-way street. The people of those countries must make some efforts and sacrifices to bring their standard of living up the ladder.

There is a certain amount of resentment against the United

States in Latin America. Perhaps there will always be some hostility, but we should make the best of our relations with our neighbors.

Communist Threat

The population of Latin America today is greater than the United States and Canada combined, and the population south of the border is growing faster than in this country. The 1960 U.S. population was about 180,000,000, while the total population of the 21 Latin American countries was 197,350,000.

Brazil, with 66,000,000 people, is the largest Latin American country; Mexico second with 34,600,000, and Argentina third with 21,000,000.

But the growing Communism in Latin America is cause for alarm, not only to the particular young businessman from the Far South who called Washington a few days ago, but to many others, and to the government in Washington. The United States investors in other Latin American countries point to what happened in Cuba, where the Castro Government has confiscated a billion and a halfdollars worth of property of United States citizens without compensation.

Cuba is in the strong hands of the Communists, but there is hope-and strong hope at thatthat the day is coming when Castro will be tossed out, and a new regime will restore order out of chaos and improve the lot of the people of Cuba.

CED's Report

The Committee for Economic Development, after a two-year study of economic and social progress in Latin America, said a few days ago that it is urgent that we make progress in de-veloping policy here at home and in implementing programs in cooperation with Latin America. The statement growing out of the lengthy research work was released by a subcommittee headed by Thomas D. Cabot, Chairman of the Cabot Corporation of Boston, and by T. V. Houser, Director of Sears, Roebuck and Company.

The statement, titled "Cooperation for Progress in Latin America," said that "economic and social progress in many countries of Latin America will require radical, even revolutionary, changes of some of the institutions that now exist there.

"But a revolution of the Castro type," said the statement, while it may be able to achieve some needed reforms, is not a route to development. Development requires incentive, opportunity and talent in an environment that will attract or produce capital. The Castro revolution perpetuates civil war, drives out talent and frightens away capital. Moreover, it destroys the fundamental human liberties that were Castro's own rallying cry when he first challenged the Batista dictatorship."

Our country should act promptly in making available an initial contribution of \$500,-000,000 for a special Inter-American fund for Social Progress as outlined at the Bogota Conference. This fund would be administered primarily by the Inter - American Development Bank. It would supply capital and technical assistance for local government efforts to aid in social progress.

If the fund proves to be of

"You've been promoted, Workhorse, you're now the third pushbutton on the right!"

as much value as some people in authority believe it will be, perhaps our government will want to increase the funds.

Poor Teacher

Latin America's biggest export is petroleum. Coffee is second. Venezuela supplies most of the oil exports. Coffee exports run from 50% to 75% of the total exports of Brazil, Colombia, Costa Rica, El Salvador, Guatemala, and Haiti.

The United States is the largest importer of coffee of any country in the world. At this time there is a lot more coffee being produced than can be marketed. Apparently the best solution to the coffee problem is to reduce the output.

The United States is not in position to tell or even suggest too strongly what Latin America should do about its own overproduction of coffee. After years of experience, and the expenditures of hundreds of millions of dollars of taxpayers' funds, we have utterly failed so far in solving our own agricultural production problems.

Nevertheless, it seems that the subcommittee for the Committee for Economic Development, is on firm ground when it recommends that the United States support the efforts of Latin American coffee producers to get European countries to reduce their burdensome excise taxes on coffee and soften the tariff discrimination in Europe.

There are other commodity problems in Latin America besides coffee, but coffee is the biggest by far and the most important, because it affects more countries and their economies.

The major subject affecting United States investors and would-be investors in Latin America at this time is the expropriation of property by radical governments and reformers. The time may come when our government will have to do much more than it is now doing to encourage the risk of investments in some Latin American countries.

[This column is intended to reflect the "behind the scene" interpretation from the nation's Capital and may or may not coincide with the "Chronicle's" own views.]
